ACKNOWLEDGEMENT

The researchers extend their heartfelt appreciation to everyone who contributed to the successful completion of this study, *"Exploring the Experiences of English Major Teachers Handling Non-English Subjects."* The generous sharing of time, knowledge, and expertise by all contributors was instrumental in bringing this research to fruition. This journey was both challenging and fulfilling, and we are truly thankful to the following individuals who made it all possible.

First and foremost, we express our deepest gratitude to our research adviser, **Ms. Ana Marie L. Monte**, for her honest insights, constant encouragement, and steadfast guidance throughout the course of this project. Her support was vital in ensuring the completion of this study.

To our research mentor, **Ms. Nailyn P. Prusia**, we are immensely thankful for her exceptional mentorship. Her expertise, patience, and continued guidance, despite her busy schedule, greatly influenced the depth and direction of our research. Her timely feedback and helpful revisions made the entire process more manageable and productive.

We also sincerely thank our **panel members** for their unwavering commitment, extensive knowledge, and valuable suggestions, which significantly improved the quality of this research. Your dedication to your fields and your collaborative spirit were crucial in refining and enriching our work.

Our heartfelt thanks go to our **family and friends**, whose unending support, patience, and belief in us made this journey possible. Their moral encouragement and

financial help especially during the toughest moments kept us moving forward with courage and hope.

Lastly, to our **participants**, particularly the English teachers, we are deeply grateful for your cooperation, trust, and the generous time you devoted to this study. Your involvement was essential to the success of our research.

DEDICATION

This research is wholeheartedly dedicated to my beloved parents, who have been my constant source of inspiration and strength, especially during moments when I felt like giving up. Their unwavering moral, spiritual, emotional, and financial support has been instrumental throughout this journey. To my adviser, mentor, friends, and groupmates, thank you for your guidance, encouragement, and the words that helped me push forward. To my dearest son, you are my greatest motivation and the reason I strive to become better each day; this work is especially for you. And above all, to the Almighty God, thank You for the guidance, strength, clarity of mind, protection, and the blessing of a healthy life. All of this, I humbly and wholeheartedly offer to You.

Ente, Shahaine

This research paper is lovingly dedicated to our respective parents, who have been our support financially and physically. They have given us the drive to focus and not be bothered by the expenses. With their love and support, this research would not have been made possible. I also dedicate this research paper to our teachers who assisted us by giving their wisdom along the way, to my fellow researchers who sacrificed and gave their hearts, to my family who supports me in everything, and most of all to the Almighty God who gives me strength and good health while doing this.

Idaño, Ronnel

This study is first and foremost dedicated to the Almighty God, whose unwavering guidance, wisdom, and boundless grace have illuminated every step of this academic journey. To my beloved parents, thank you for being my constant source of inspiration, strength, and encouragement. Your sacrifices and love have been the foundation of my perseverance. I also extend my deepest appreciation to my family and dear friends, whose support, understanding, and shared laughter have lightened the burdens and made even the most difficult days more bearable. To our research adviser and mentor, your insightful guidance and steadfast support have been instrumental in the completion of this work. To my group members, thank you for your dedication, cooperation, and genuine teamwork. You have made this journey not only manageable but meaningful. Lastly, to our research participants, particularly the English major teachers, your openness and trust in sharing your experiences have breathed life into this study, and for that, I am sincerely grateful.

Mendez, Nathaniel L.

This study is dedicated to my beloved parents, whose unwavering support, guidance, and strength have been vital to my journey. To my dear friends, thank you for the encouragement and laughter that lightened the load along the way. Above all, I am deeply grateful to Almighty God for the guidance and blessings that made this work possible. Your support and presence have shaped the heart of this research, and for that, I am truly thankful.

Monte, Claire Gift

This study is dedicated to my loving mom and siblings, who are very supportive of me and give me the strength to keep fighting for my dreams and goals in life. Their words always lift me up whenever I feel unworthy. I also dedicate this study to my research group mates and, mostly, our research leader for being such a great leader. Thank you for always guiding us, your group members. Lastly, I want to thank God for protecting and guiding us in our path. I am truly grateful for the strength you provide in our journey.

Villar, Audree Maxine

This research is a humble fruit of perseverance, faith, and purpose.

Born from countless trials, silent prayers, and unwavering hope

that every effort, no matter how small, leads to something meaningful.

The Researchers

APPROVAL SHEET A

The research study entitled “**Exploring the Experiences of English Major Teachers Handling Non-English Subjects**”, prepared by Shahaine C. Ente, Ronnel A. Idaño, Nathaniel L. Mendez, Claire Gift P. Monte, and Audree Maxine C. Villar, is hereby submitted to the research committee for evaluation as fulfillment of the requirement for the degree of BACHELOR OF SECONDARY EDUCATION MAJOR IN ENGLISH.

ABSTRACT

TITLE	EXPLORING THE EXPERIENCES OF ENGLISH MAJOR TEACHERS HANDLING NON-ENGLISH SUBJECTS
AUTHORS	ENTE, SHAHAINE IDAÑO, RONNEL MENDEZ, NATHANIEL L. MONTE, CLAIRE GIFT VILLAR, AUDREE MAXINE
SCHOOL	Colegio de San Antonio de Padua Supervised by the Lasallian Office
DEGREE PROGRAM	Bachelor of Secondary Education Major in English
ADVISER	MS. NAILYN P. PRUSIA

This study explored the lived experiences of English major teachers assigned to teach non-English subjects in Danao City using a qualitative phenomenological design. Six English teachers from two public schools were purposively selected and interviewed in-depth, with data analyzed through Colaizzi's method to identify recurring themes. Findings revealed major challenges, such as difficulties in mastering unfamiliar content, language barriers, instructional shifts, and the psychological toll of out-of-field teaching. Teachers

coped through self-directed learning, peer collaboration, professional development, and mindset adjustments, with administrative support, differentiated instruction, and student-centered strategies helping to ease difficulties. The study emphasizes the need for targeted training and institutional support to better prepare English majors for teaching non-specialized subjects and suggests future research on the long-term effects on teacher performance, satisfaction, and student outcomes.

Keywords: *Out-of-Field Teaching, Teaching Experiences, Teaching Challenges*

CHAPTER I

INTRODUCTION

Rationale

Among other professions, teaching remains the most critical of all, as every profession stems from it, making it the most noble. People of diverse backgrounds seek to educate themselves, which further supports the observation made by several foreign experts. Countless influencers of education should ignite the passion of each Filipino. Nevertheless, in the changing face of education, teachers often find themselves struggling with the burden of instructing learners in areas outside their primary specialization. Out-of-field teaching is the phenomenon in which teachers find themselves lacking in rote skills due to expanded options stemming from teacher surpluses or poor administrative choices.

The realities of English teachers coping with curriculum overload contain a paradox of challenges and opportunities for professional development. It has been reported that out-of-field teaching affects self-efficacy, instructional effectiveness, and general job satisfaction (Buenacosa & Petalla, 2022). Out-of-field teaching is a phenomenon that affects teachers and students in several critical ways. They describe a typical situation in which teachers struggle with low self-esteem and mastering new content, which undermines their self-efficacy and educational effectiveness.

The challenges faced by English teachers responsible for other subjects extend beyond any specific location and are experienced worldwide. For example, a study in Australia found that teaching outside of one's area of expertise is linked to increased levels of stress and feelings of professional inadequacy. Similarly, a study in the United States

discovered that teachers assigned to teach subjects outside their areas of expertise were more likely to leave the profession due to dissatisfaction. Out-of-field teachers in the UK often encounter difficulties in their teaching experiences because they lack the necessary qualifications for classroom management and student engagement, according to Du Plessis et al. (2018). These international perspectives help in understanding the complexity and prevalence of the issue regarding support for teachers who are not in their specialization.

This further illustrates the detrimental effects of out-of-field instruction on the Philippine educational system. Senior high school teachers in Eastern Visayas described how they were assigned specialized subjects that were outside of their areas of expertise and how they struggled with the material and the amount of self-study necessary to teach those subjects (del Pilar & Militante, 2020). Students from San Celestino and San Isidro Integrated National High Schools also indicated that they had difficulty planning lessons and understanding the content (Roxas, 2023). Additionally, analysis of the study conducted in Cagayan de Oro City revealed that meaningful professional development is crucial for teachers who are out of the field (Bayani and Guhao, 2017). Such observations highlight the need for focused professional development and support systems that will aid teachers in coping with the challenges of out-of-field teaching. Furthermore, the impact of teachers being out of the field results in poor learning outcomes among students, as indicated by the results of the national achievement tests. Therefore, it is essential to address this issue if quality teaching is to be realized and teachers can effectively perform their teaching roles.

There are specific challenges in the system when English majors are assigned to teach subjects other than English. This is what we call out-of-field teaching. Although several studies have articulated the general impact of the teaching of subjects out of field

has on teacher effectiveness and on students, there is scanty of studies that have described the specific difficulties that these teachers face, the strategies that they use, the resources that are available to support them, and the coping mechanisms that they use to deal with these challenges.

The aim of the present study is to provide useful information that can direct better support systems that will enhance learning outcomes of students and teacher satisfaction in the Philippine educational system. To achieve this, this study investigates the common difficulties that English major teachers face when assigned to teach non-English subjects, the strategies that they use in teaching, the resources that are available to support them, and how they cope with these challenges.

Statement of the Problem

This study aimed to determine the experiences of English teachers handling non-English subjects.

Specifically, this study sought to answer the following questions:

1. What are the common challenges faced by English major teachers when teaching non-English subjects?
2. What approaches do English teachers use to adapt their teaching methods for non-English subjects?
3. How do support systems, including administrative support, influence English teachers' experiences and aid in teaching non-English subjects?
4. What coping mechanisms do English teachers employ to manage the challenges they face in handling non-English subjects?

Objectives of the Study

The study on the experiences of English major teachers handling non-English subjects aimed to achieve the following objectives:

1. identify the common challenges faced by English major teachers when teaching non-English subjects.
2. determine the various approaches that English teachers use to adapt their teaching methods for non-English subjects.
3. examine how support systems, including administrative support, influence English teachers' experiences and effectiveness in teaching non-English subjects.

4. explore the coping mechanisms that English teachers employ to manage the challenges encountered while teaching non-English subjects.

Significance of the Study

Teachers indeed play an imperative role in cultivating our future professionals. Through the suggested method, the researchers aimed to know the experiences of English teachers in public schools who are teaching non-English subjects. This is the primary purpose of this research. To the following people, this will be of great help:

Students. They will benefit the most when educators are well-equipped and supported. This will result in enhanced classroom experiences and holistic learning outcomes.

English Educators. This study will also aid English teachers to gain practical insights into how fellow teachers have managed the challenge of teaching outside their field of expertise. It could also provide them with informative strategies to handle various non-specialized subjects and their impact on professional growth.

School Administrators. The findings will enlighten them about the impact of assigning subjects outside of the teacher's expertise. This could improve support systems for language teachers and provide them with valuable training programs if needed.

Future Researchers. The findings may contain context about strategies employed by English teachers in handling out-of-field teaching, which can serve as a reference or prompt new questions for future research. Additionally, they can acquire knowledge from the methods and approaches that are used in this study.

Scope and Limitations

This study employed a phenomenological qualitative research method to explore the lived experiences of English teachers who handled subjects outside their field of specialization. A purposive sampling technique was used to select English teachers from the selected schools in Danao City.

To ensure that the participants were suitable for the study, specific inclusion criteria were established. Participants were required to (a) be currently employed as public school English teachers in Danao City under the Department of Education (DepEd), (b) have at least one year of experience teaching non-English subjects to guarantee adequate exposure to out-of-field teaching, (c) have a minimum of three years of total teaching experience to ensure a well-rounded understanding of the teaching profession, and (d) have taught English as a subject, in addition to non-English subjects, to provide relevant insights and comparisons between their major and non-major teaching experiences.

On the other hand, exclusion criteria were also set to ensure the relevance and credibility of the data collected. Teachers were excluded from the study if they (a) were not currently employed as public school English teachers in Danao City under the Department of Education (DepEd), (b) were unwilling to provide informed consent, (c) lacked at least one year of experience teaching non-English subjects, (d) had less than three years of total teaching experience, (e) had not taught English as a subject, and (f) had previously participated in similar research projects, to avoid data repetition or bias. The following criteria were carefully considered in order to ensure that the selection of

participants with experiences aligned closely with this study's objectives and who could provide meaningful and direct insights into the phenomenon of 'out of field teaching'.

Focusing on the teachers' experiences and the strategies that they adopted and employed, the data in this study were collected through semi-structured interviews, employing an open-ended questionnaire, to gather necessary data and to capture in-depth insights.

This study was exclusive to the public-school English teachers in Danao City and was carried out over five months. Results were specific to this geographic and professional context, with broader generalizations being constrained by the sample size and setting.

Definition of Terms

The following terms are hereunder defined as used operationally in this study:

English Teachers. Educators who have specialized in teaching English as their primary subject. In the context of this study, they are teachers whose expertise is in English but are assigned to teach non-English subjects.

Non-English Subjects. These are subjects that are not related to English language and literature, such as General Science, Mathematics, and social studies.

Out-of-Field Teaching. Refers to a phenomenon where teachers are assigned to teach subjects that are outside their primary area of expertise.

Quality Teaching. The extent to which a teacher enhances student learning, engagement, and achievement is considered quality teaching and involves delivering content in a way that meets educational standards and improves student outcomes.

Teaching Practices. The methods and strategies that teachers employ in the classroom to deliver instruction and the ways English teachers adapt their skills to teach non-English subjects effectively.

CHAPTER II

REVIEW OF RELATED LITERATURE AND STUDIES

This chapter presents evaluations of journals, articles, and other documents that are essential in the discussion of this research topic. The literature used in this study provided a strong foundation to deeply understand the lived experiences of English teachers both locally and globally, thus enriching contextual relevance and insights of this study.

Challenges

It is already a fact that teaching outside one's expertise is one major challenge that teachers face, especially in public schools. According to Nob & Tañola (2024), the key problem is the lack of mastery of content and teaching resources, especially for those teaching subjects outside their fields, which often leads to feelings of ineffectiveness and frustration. For example, teachers teaching TLE have difficulty in understanding unfamiliar topics, which lowers their self-confidence in teaching their students to lessons effectively to the learner (Tingzon & Buyok, 2022). Similarly, ESL teachers struggle with students who exhibit low language proficiency, hindering their participation in the classroom and ultimately academic success (Castro, 2023). Castro also notes that language divides between teachers, students, and parents are often the cause of student disengagement, and the quality of the learning experience suffers as a result. Moreover, handling a classroom is more challenging if the students have different language capabilities to maintain a conducive surrounding (Hidayat et al., 2024). It is aggravated by the inadequacy or lack of resources and equipment, especially in subjects with hands-on learning, which hampers teachers from delivering effective lessons (Tingzon & Buyok,

2022). Taken together, these challenges result in escalated stress, anxiety, and emotional strain among educators (Evardo, 2024).

Approaches

To overcome these challenges, teachers use various methods to modify and improve their teaching methods. Collaborative learning is a common method where teachers seek guidance from colleagues and experts to better understand what they need to teach (Tingzon & Buyok, 2022). Another effective strategy is to adopt innovative teaching methods to adapt the curriculum and cater to students with different needs (Lovitos & Donato, 2023). English teachers have also found that implementing group discussions and tailored communication techniques can be effective in managing students' different language levels (Hidayat et al., 2024). These methods help teachers maintain a good learning environment even if they are not professionals in the subject.

Support Systems

Additionally, the amount of support teachers receive from school leaders is critical, especially for those who teach outside of their area of specialization. How principals and administrators view teaching outside of their area of specialization can greatly affect teachers' experiences and opportunities for growth (Porsch & Hobbs, 2024). When leadership is supportive, teachers are more likely to receive the training and resources they need to adjust to unfamiliar subjects (Mashele & Mafuwane, 2024). Ongoing professional development is especially important as it helps teachers solidify their subject knowledge and improve their teaching styles (Evardo, 2024). Well-structured training programs, such as those proposed by Quinn and Hobbs (2024), are essential in addressing the challenges

faced by nonspecialist teachers. These programs help to ensure that teachers are up-to-date on effective teaching strategies and continue to grow in their area of expertise.

Coping Mechanisms

To cope with these challenges, educators have employed a variety of strategies to cope with the challenges of teaching and learning beyond the classroom. Educators have sought peer assistance in bringing teachers together with support for sharing resources, pedagogy, and knowledge (Tingzon & Buyok, 2022). Educators ask experienced teachers or subject experts for advice (Tingzon & Buyok, 2022). Furthermore, educators learn on the go and continue their learning in ongoing professional development to understand the subjects they teach (Tingzon & Buyok, 2022). Finally, educators use adaptive approaches in changing their teaching approaches to be flexible, creative, and adaptive to students in general subjects (Lovitos, 2023).

The published journals, articles, and books greatly increase the scope of this research as they reveal experiences of English major teachers who teach non-English subjects. They deal with the following major issues: the difficulties involved, the strategies used by these teachers to confront their teaching experiences, the support they get, and how they cope. By highlighting the various difficulties confronted and the strategies used to confront these experiences, they provide valuable insights that serve the purposes of this study.

Review of Related Studies

Out-of-field teaching is a demanding experience for teachers because of the difficulty they face when teaching out-of-field subjects. As stated by Roxas (2023), teachers from San Celestino and San Isidro Integrated National High School have faced many problems with lesson planning and preparation of activities, as well as mastery of subject matter, which impede their ability to deliver quality essential learning to their students. Talingting (2019) further adds that out-of-field teachers function only at a moderate level in the teaching-learning process. This situation is mainly attributed to inadequate availability of instructional materials and subject matter expertise.

To these problems, teachers respond in different ways. As Talingting (2019) pointed out, many teachers conduct individual research and collaborate with their colleagues in learning, thus gaining a deeper knowledge of the subject. According to Roxas (2023), another source of help for teachers comes about when they involve their students in using ICT tools, role-playing, and class reporting activities.

Crisan and Hobbs (2019) look beneath the surface to examine the realities of the challenges of teaching out-of-field and the coping strategies that teachers use. Their research highlights the difficulties associated with out-of-field teachers acquiring the knowledge and associated skills that are often required of them. Misalignment of initial training and subject areas that out-of-field teachers are required to teach has implications for subject knowledge and, by extension, instructional quality and educational achievement.

Moreover, Del Pilar & Militante (2020) carried out descriptive phenomenology research to describe the experiences of out-of-field teachers. An analysis of results shows how varied the out-of-field practices and the coping strategies these teachers show, as well as the meaning of out-of-field experience for these professionals.

Hobbs (2020) explores how out-of-field teaching is a systemic problem related to teacher shortages and scheduling conflicts. These teacher shortages and scheduling conflicts often put teachers in subjects they have not been trained for and make it even more difficult to deliver lessons by creating challenges in engaging students. To cope with these difficulties, teachers seek professional development programs and other learning opportunities. Hobbs proposes subject-specific training for out-of-field teachers. Better teacher education could lead to better teaching and learning.

Collectively, these studies helped to ground the premises of this research, providing information about the difficulties and strategies of coping with out-of-field teaching. The inclusion of published and unpublished works provides a relevant rationale that helps shape the direction of this research and the goals that shape it, and that also helps to shape the interpretation of the experiences of English major teachers assigned to non-English classes.

CHAPTER III

RESEARCH METHODOLOGY

This chapter discusses the research methodology and procedures employed by the researchers. These include the research design, research participants, research instrument, research locale, data-gathering procedure, and method of data analysis.

Research Design

This study used a qualitative research method, specifically a phenomenological research design to explore in depth the experiences of English teachers who taught non-English subjects. The study sought to find out their perceptions about the difficulties and strategies involved in teaching subjects they are not familiar with. The study used phenomenology because it is concerned with the essential characteristics of an experience. It involves an exploration of the thoughts, feeling, and perceptions of these educators. The researchers opted to use phenomenological research design because the study was interested in the essence of the experiences of these teachers. This approach to research allowed the researchers to have a better understanding of the experiences of the teachers. It enabled them to know the meaning attached by these teachers to their experiences as well as how they cope with the experience. The goal was not to generate new theories but to describe and interpret these experiences as they were lived by these participants.

Data collection methods included in-depth interviews, which enabled the participants to reveal their stories and perspectives. Therefore, the subjective experiences of the English teachers who taught non-English subjects were reflected in the findings, and the significance of the findings for these teachers was captured.

Research Participants

The research participants for this study were English teachers in Danao City who taught non-English subjects. A purposive sampling method was employed to identify individuals best suited for the research objectives, focusing on specific characteristics of the target participants. This study included English teachers from various public schools in Danao City under the Department of Education (DepEd) for the Academic Year 2024–2025.

The qualifications of the participants, such as their academic background and teaching experience, significantly influenced their abilities to teach non-English subjects. Teachers with strong foundations in English education were expected to bring excellent communication, organizational, and critical-thinking skills, which contributed positively to their handling of subjects outside their specialization. However, their lack of formal training in non-English content areas presented challenges. By examining how they navigated these challenges, the study aimed to uncover both the strategies they employed and the areas where additional support was necessary.

Furthermore, this research focused exclusively on public school teachers, as their experiences were expected to differ significantly from those of private school educators. Public school teachers were more likely to face challenges such as larger class sizes, limited resources, and a higher likelihood of being assigned out-of-field teaching roles. These factors made public schools an ideal setting for exploring the phenomenon of teaching non-English subjects.

To ensure that participants met the study's objectives, specific criteria were applied. Participants included male or female teachers who held a teaching position in a public school, had experience teaching non-English subjects, and possessed relevant qualifications that enabled them to provide comprehensive insights into their experiences.

Before the interviews, participants were provided with a detailed information sheet outlining the study's objectives and requirements. To uphold ethical standards, they were required to sign an informed consent form, ensuring their privacy and confidentiality throughout the study. Additionally, the researchers conducted a brief orientation to explain the research process, emphasizing the exploration of English teachers' experiences in handling other subjects.

Inclusion Criteria

To gain a deeper understanding of the experiences of English teachers who handled subjects outside their area of expertise, specific criteria were established for participant selection in this study. Participants were required to (a) be currently employed as public school English teachers in Danao City under the Department of Education (DepEd) to ensure that they were actively teaching and that their experiences were both current and relevant to the study's objectives, (b) have at least one year of prior experience teaching non-English subjects to ensure they had sufficient exposure to the challenges and strategies involved in handling out-of-field teaching assignments, (c) have a minimum of three years of total teaching experience, which ensured they had developed a foundational understanding of the teaching profession and provided a broader context to their experiences, and (d) have experience teaching English as a subject, in addition to their out-

of-field teaching assignment, to ensure that they possessed direct experience in their field of specialization while also navigating the challenges of teaching non-English subjects.

These criteria were carefully chosen to align with the study's objectives. The factors considered in deciding these criteria included the importance of recent teaching experiences, the need for adequate exposure to out-of-field teaching roles, and the value of overall teaching experience in shaping participants' perspectives and strategies. By focusing on these elements, the study aimed to capture a comprehensive understanding of the phenomenon under investigation.

Exclusion Criteria

Building on the criteria established to guide participant selection, the exclusion criteria ensured that only the most relevant individuals were included in the study. Teachers were excluded if they (a) were not currently employed as public school English teachers in Danao City under the Department of Education (DepEd), to maintain the focus on active practitioners within the target population, (b) were unwilling to provide informed consent, as their voluntary participation was essential to uphold ethical research practices, (c) lacked at least one year of experience in teaching non-English subjects, as such exposure was necessary to provide meaningful insights into the challenges and strategies of out-of-field teaching, (d) had less than three years of total teaching experience, to ensure that participants had a well-rounded understanding of the teaching profession, (e) had not taught English as a subject, as their direct experience in teaching their field of specialization was necessary to compare their approaches, challenges, and strategies in both their major and non-major subjects, and (f) had previously participated in similar research projects, to avoid potential bias or repetition in the data collected. These criteria were designed to

ensure that participants genuinely met the study's objectives, contributed relevant insights, and maintained the validity of the findings.

Research Instrument

The researchers utilized semi-structured interviews that included open-ended questions to collect insights into the participants' perspectives and experiences. This qualitative research method allowed for in-depth one-on-one discussions between the researchers and participants. During the interviews, participants were asked about the challenges they faced, their teaching approaches, the support systems available to them, and the coping mechanisms they employed when teaching non-English subjects. In this study, interviews were conducted with English teachers across various public schools in Danao City to explore their unique experiences and the challenges they faced while teaching subjects outside their area of expertise.

Research Locale

This study was conducted in public secondary schools located within Danao City. In order to conduct this study, the researchers sought permission from the DepEd Danao City Division since this study will be conducted in public schools under the jurisdiction of DepEd Danao City Division. Certainly, the schools involved in this study were readily available to the researchers. The two public secondary schools chosen were: (a) Estefa O. Monte Memorial National High School; and (b) Beatriz D. Durano Memorial National High School which is within Danao City because it was convenient for the researchers and the phenomenon could be investigated in a practical and meaningful way. The availability of these two schools served as a basis for choosing the two schools as participants in this

study. They were near the researchers and the phenomenon under study so as to minimize the constraints that may arise from logistical problems that may affect the timely completion of interviews and observations. Conducting interviews in only two schools would also allow for a deeper and more comprehensive analysis of the teachers' experiences assigned in non-English subjects and make the research more manageable in terms of scope and time given to the researchers.

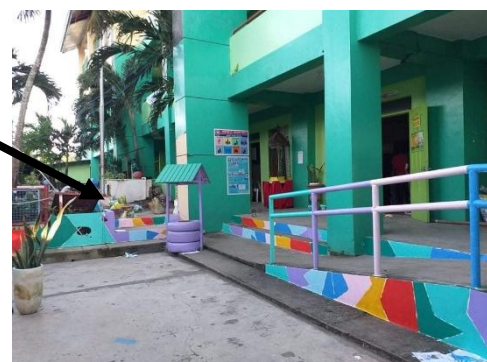

Figure 1. Location Map of the Research Environment

Data Collection and Procedure

The data collection for this study involved conducting in-depth interviews with English teachers from various public schools in Danao City to gather information about their experiences and challenges in teaching non-English subjects. This systematic approach aimed to provide detailed insights into their challenges, approaches, coping mechanisms they employed, and the support systems available to them.

Preliminary Procedure

The researchers sent a request letter to Dr. Alberto Jumao-as Jr., the Vice-President for Academics and Research, for permission to conduct the study outside the institution. With the approval of Dr. Jumao-as, the researchers went to the Department of Education (DepEd Danao) for permission to conduct the study in the selected public schools. Following this, they reached out to the school principals to secure their consent and cooperation. Once all approvals were in place, the researchers coordinated with the schools to arrange interviews with the participating English teachers.

Actual Data Gathering

The researchers began the data collection process by distributing a participant information sheet that clearly explained the study's purpose, goals, and the role of the participants. Subsequently, the researchers presented the informed consent forms to each participant. Once the participants provided their consent by signing the forms, the researchers proceeded with conducting semi-structured interviews. These interviews incorporated open-ended questions designed to facilitate an in-depth exploration of the participants' experiences and perspectives. Each interview was conducted individually to

maintain confidentiality and was scheduled for a reasonable duration to accommodate the participants' availability. After completing the interviews, the researchers transcribed the collected data verbatim. Colaizzi's method was then employed to analyze the data in a systematic manner.

Self-Awareness

Self-awareness in this study means the researchers became conscious of their own thoughts, biases, and behaviors during data collection and analysis. The researchers desired to know their own perceptions, attitudes, and biases about the experiences of English teachers who teach non-English subjects in Danao City. This reflective process was very important in order to prevent their personal assumptions from tainting the findings of the study.

After they gathered the data, the researchers engaged in a process called bracketing, a stage where the researchers pushed aside their preconceived notions and judgments about the experiences of the teachers. This was very important so that the real experiences of the participants could be revealed. The researchers' own experiences did not allow their preconceived notions and beliefs to influence their findings. By acknowledging that they were already part of the study, the researchers were able to determine and acknowledge the influence they had on the research setting. Thus, they tried to be neutral and focus on what the participants had to say.

Collecting data in qualitative research and specifically in a phenomenological study was challenging and emotionally draining. The researchers should be ready to handle their emotions, particularly when confronted with difficult and distressing experiences of the

participants. The researchers should also maintain their objectivity so that they are not too involved with the experiences of the participants.

The researchers practiced self-awareness and reflexivity throughout the study. They closely observed their own actions and how these could affect the information they gathered. This was important so that their personal influence would not taint the analysis of the data. The researchers were English teachers who taught non-English subjects.

Bracketing

Bracketing was a fundamental aspect of this qualitative study, particularly within its phenomenological approach, which prioritized understanding participants' lived experiences. In this context, bracketing referred to the deliberate effort to set aside any personal biases, assumptions, and preconceived notions that the researchers might have had about the experiences of English teachers handling non-English subjects. This practice enabled the researchers to focus solely on the participants' narratives, ensuring that their interpretations accurately reflected the true essence of the participants' perspectives.

To achieve this, the researchers engaged in reflexive activities both before and during the data collection and analysis stages. They began by conducting a mentality assessment to mentally prepare for the study with a neutral outlook, followed by defining the scope of the literature review to prevent pre-existing theories or concepts from biasing the interpretation of the data. Additionally, they planned the data analysis using Colaizzi's method, ensuring that the participants' responses guided the thematic structure.

During the interviews, the researchers meticulously documented the participants' answers, consciously distinguishing their own viewpoints from those of the participants.

This bracketing process also involved conducting preliminary analyses or pre-interview sessions to refine the approach and validate the data. By strictly adhering to these practices, the researchers aimed to enhance the rigor and credibility of the study, presenting a more accurate and unbiased portrayal of the challenges faced by English teachers handling non-English subjects, free from external assumptions or subjective influences.

Informed Consent

The researchers provided informed consent forms to all participants, guaranteeing that their responses remained confidential and were only used for research purposes. Participants were given a detailed explanation of the study's procedures and were assured that their participation was voluntary. Upon agreeing to these terms, they signed the consent forms, signifying their understanding and willingness to take part in the study.

Member Checking

After completing the data collection, the researchers conducted a member-checking process. This step involved sharing the initial findings with the participants to verify the accuracy of their statements and ensure that the information collected truly reflected their experiences. Any clarifications or adjustments suggested by the participants were incorporated into the data to maintain the credibility and validity of the study.

Triangulation Method

The researchers employed the triangulation method, specifically "methodological triangulation," to validate the findings of this study. Methodological triangulation was utilized to ensure that the research findings accurately reflected the experiences of English teachers handling non-English subjects and that these findings were supported by credible

evidence. This approach involved the use of different data collection methods and participant samples to provide a comprehensive understanding of the phenomenon under investigation.

The primary objective of employing triangulation in this study was not solely to cross-validate the data but to explore and capture various dimensions of the participants' experiences and perspectives. By integrating data collected through semi-structured interviews, observations, and any other relevant sources, the researchers aimed to uncover different facets of the challenges faced by English teachers when teaching outside their area of expertise. This approach also included the observation of participants' emotions during the interviews and interactions, as emotional expressions could reveal underlying challenges or coping mechanisms related to teaching non-English subjects. The emotional manifestations observed, such as signs of stress, frustration, or satisfaction, were analyzed to further understand how these emotions influenced their teaching experiences.

By triangulating these diverse data sources, the researchers aimed to enhance the reliability and depth of the findings, ensuring that they offered a well-rounded representation of the participants' lived experiences (Kulkarni, 2013). This multi-faceted approach helped to capture both the cognitive and emotional dimensions of the teachers' experiences, providing a fuller picture of the challenges and strategies involved in out-of-field teaching.

Ethical Consideration

The researchers approached ethical considerations as more than just a set of norms distinguishing right from wrong; they regarded them as fundamental principles essential

for maintaining scientific integrity, ensuring research validity, and safeguarding the rights of all participants involved in the study. Upholding these ethical standards was critical to preserving the trust and credibility of the research process.

The ethical framework of this study emphasized that participants took part voluntarily, with a comprehensive understanding of the study's purpose, procedures, and their role in it. Prior to participation, the researchers provided each participant with an informed consent form, clearly outlining the details of the study, including how their data was collected, stored, and utilized. This ensured that participants were fully informed and aware of their rights, including the right to withdraw from the study at any point without any repercussions.

To protect the confidentiality and privacy of the participants, the researchers took all necessary steps to anonymize the data, ensuring that no personal identifiers were linked to the responses during data analysis and reporting. The data was securely stored and accessed only by the research team to prevent unauthorized use or disclosure.

Given that the study involved English teachers handling non-English subjects, the researchers were particularly mindful of any potential power dynamics and emotional sensitivities during the interview process. They aimed to create a respectful and supportive environment, allowing participants to share their experiences openly without feeling pressured or judged. The researchers also recognized their own biases and potential influence on the study's outcomes. Through reflexivity and the practice of bracketing, they continually reflected on their role and perspective, striving to minimize any personal assumptions that might affect the interpretation of the participants' experiences.

Rigor of the Study

The study employed a semi-structured interview format as the primary tool to achieve the objectives of the research. To ensure the rigor of the study, the researchers took careful measures to collect data that was appropriate for the analysis required. During the data collection process, the researchers focused on gathering information that was both relevant and clearly articulated, enabling accurate interpretation and ensuring that the findings were meaningful.

The research team worked collaboratively to ensure that all data collected was consistently understood and validated by the entire group. This process helped to avoid any confusion or misinterpretation of the data, fostering a high level of trust in the results presented. By maintaining a clear and agreed-upon understanding of the collected information, the researchers enhanced the credibility and reliability of the study's outcomes, thereby strengthening the overall rigor of the research.

Method of Data Analysis

The researchers employed Colaizzi's method of data analysis to interpret the qualitative data gathered from interviews with English teachers instructing non-English subjects. This approach was designed to systematically identify significant information from the participants' responses and organize it into coherent themes or categories that reflected their lived experiences and the challenges they encountered.

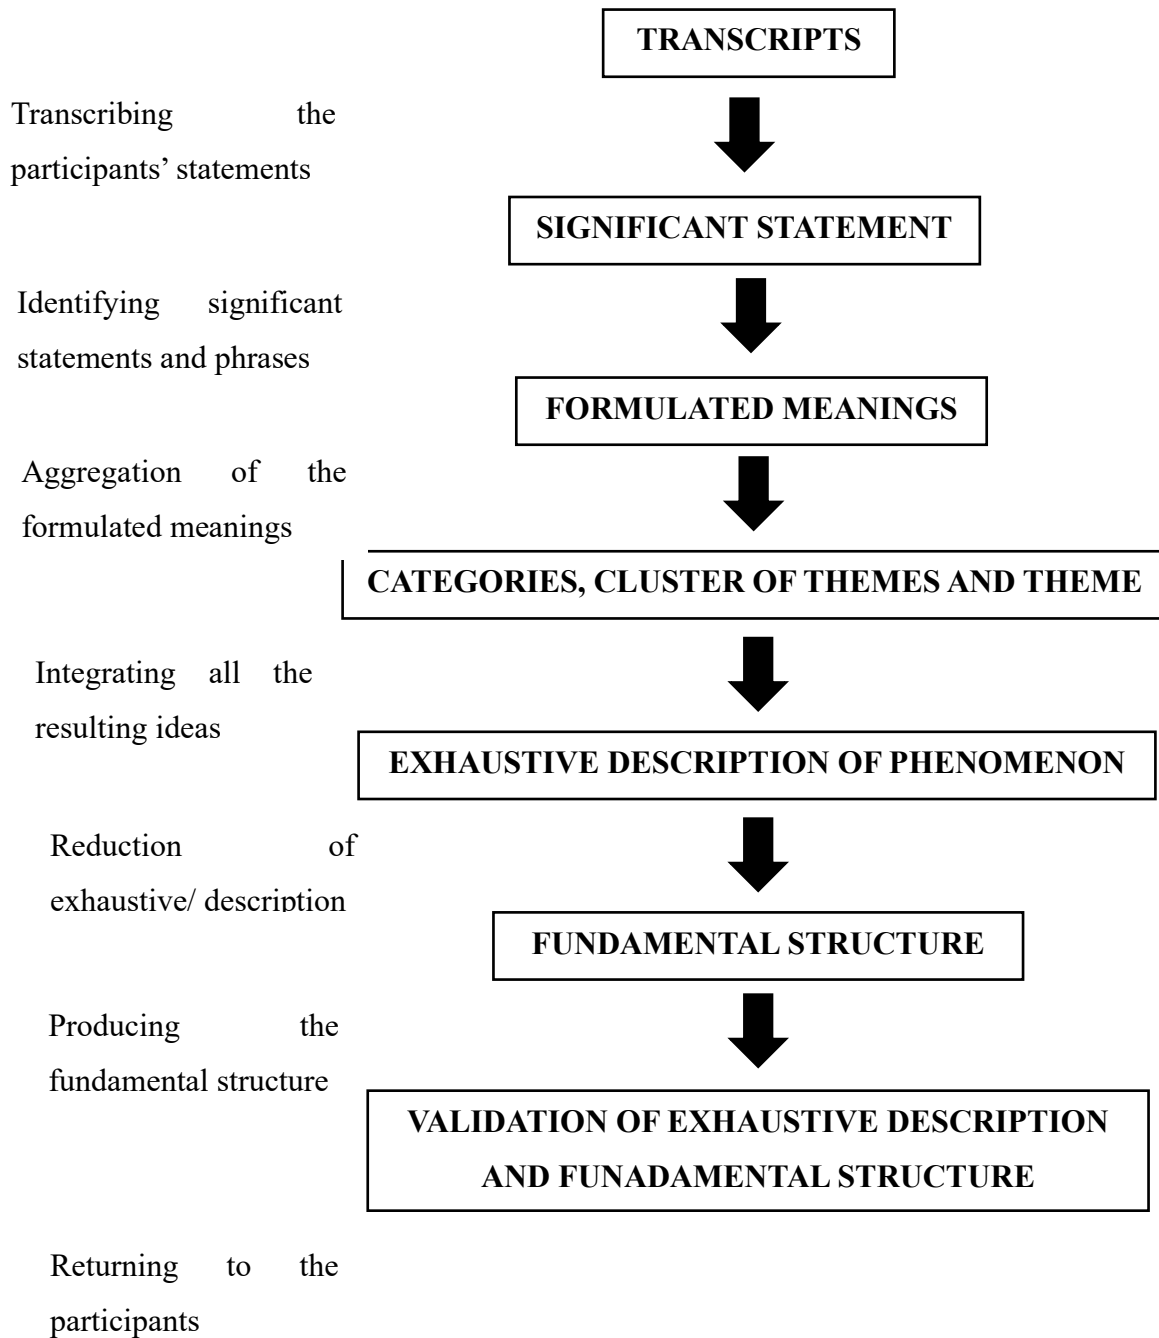

The analysis began with the researchers carefully reading through each participant's descriptions to gain a deep understanding of their perspectives. They then proceeded to extract statements that held significance to the research question, focusing on capturing the

core aspects of the participants' experiences. These significant statements were converted into precise meanings, ensuring an accurate reflection of the participants' thoughts and words.

Following this, the researchers grouped these meanings into themes that illustrated the key patterns emerging from the data. Similar themes were clustered together into broader categories to provide a clearer representation of the findings. During this process, the researchers refined the data by eliminating any redundant or misinterpreted elements to ensure that the analysis remained focused and relevant.

Finally, the themes were synthesized into a comprehensive description of the challenges faced by English teachers when teaching non-English subjects. To verify the accuracy and authenticity of the findings, the results were shared with the participants for validation, ensuring that their experiences and perspectives were correctly represented. This structured approach using Colaizzi's method aimed to enhance the credibility and reliability of the study's conclusions.

Figure 2. Illustrates the process of descriptive phenomenological data analysis created by Colaizzi (1978)

Extraction of Significant Themes

At this first level of coding, the researchers looked for different concepts and categories from the data collected, which forms the basic units of their analysis. The researchers often used highlights to distinguish concepts and categories.

A theme represents a level of pattern response or meaning from the data that is related to the research questions at hand. Themes are features in participant accounts characterizing particular perceptions or experiences that the researcher sees as relevant to the research questions. In establishing what can be considered a theme for the study, it can be used with deciding prevalence. These are patterns across data sets are important to the description of a phenomenon, and are associated to a specific research question. In qualitative research, theme identification is one of the most fundamental tasks. In data extraction, it should be informed by the purpose of the review. Extraction templates and approaches should be determined by the needs of a specific review and it should also be a relatively straightforward component of a systematic review. Data extraction processes facilitate an initial understanding and description of the shared characteristics of the body of the evidence, and will pave way for the more analytic and interpretive process of synthesis to follow. The table below presents the Significant Statements that have been extracted from the participants' responses to the research questionnaire:

Table 1: Significant Statements

Significant Statements	Participant No.	Page No.	Line No.
The first one is the language barrier. (SS1)	1	133	11
It's hard for us to teach Tagalog because we are really familiar with the English words. (SS2) <i>(It's hard for us to teach Tagalog because we are more familiar with English words.)</i> (SS2)	1	134	16-17
Other challenges will be the classroom management. (SS3)	1	134	18
The mean percentage scores of the students are lower than those you are expecting in the English test. (SS4)	1	135	46-47
Each subject uses different strategies, so when I am in the values education subject strategies will be different in the English subject. (SS5)	1	136	65-67
Like groupings, like role playing, a debate, public speaking, extemporaneous speaking. (SS6)	1	137	94-100

Technical assistance in terms of mentoring. (SS7)	1	139	149
In terms of professional development, ahh they send us to seminars and workshops. (SS8) <i>In terms of professional development, they send us to seminars and workshops. (SS8)</i>	1	139	151-152
Of course, lower my expectations. You should lower your expectations. Since you are handling subjects that are not related to your major, do not expect too much. Lower down your expectations. (SS9)	1	140	155-159
Personal strategies is done or do remedial classes. (SS10) <i>Personal strategies are done by remedial classes. (SS10)</i>	1	141	178
For me the most challenging part is basically the mastery of the topics. (SS11)	2	142	10
Unsaon nako pagpasabot nila. (SS12) <i>(How can I explain it to them.) (SS12)</i>	2	143	22
I got to the point where I question my capability and my knowledge of that certain topic. (SS13)	2	143	25

I'm really not that effective. (SS14)	2	144	38
Dapat mag research sad jud ka in addition man lang jud. Mag add pa raba kag ideas. (SS15) <i>(You should do research as well; it's just an addition. You will also add more ideas.)</i> (SS15)	2	144	49-50
Learner-centered approach man kasagaran akua but di gyud malikayan nga mag teacher-centered approach ko. (SS16) <i>(I mostly use a learner-centered approach, but I can't avoid using a teacher-centered approach sometimes.)</i> (SS16)	2	144	55-56
Kasagaran gyud sa magamit nako kay teacher-centered approach where ang communication kay akua ra. For example if I have a question... kang kinsang answer, so akua ra gihapon ang tubag. (SS17) <i>(Most of the time, what I use is a teacher-centered approach, where the communication is</i>	2	145	61-63

<i>only from me. For example, if I have a question, I'll still be the one to answer.)</i> (SS17)			
Real life kuan examples ang akoang gi hatag nila. (SS18) <i>(I give them real-life examples.)</i> (SS18)	2	145	80
Some activities nga akong ipang hatag is kanang sharing, think pair share and kana pud role playing. (SS19) <i>(Some activities that I give include sharing, think-pair-share, and role-playing.)</i> (SS19)	2	146	84-85
Encouragement. (SS20)	2	146	90
Communication. (SS21)	2	146	93
There's a communication between me and our school head or our senior high school coordinator. (SS22)	2	146	104-105
The principal always asks me how's my teaching. (SS23)	2	147	111
I always kuan man sad communicate with Ma'am. Siya man ang senior high school coordinator. (SS24)	2	147	120-121

<i>(I always communicate with Ma'am since she is the senior high school coordinator.)</i> (SS24)			
We've had seminars and akong latest lang nga naapilan kay six months ago. And Seminars I had is katong INSET professional development gihapon siya.. How to handle classroom and mga bata. (SS25) <i>(We've had seminars, and the latest one I attended was six months ago. The seminars I had were part of INSET professional development, focusing on how to handle the classroom and students.)</i> (SS25)	2	148	138-141
Sila akoang rant buddies. (SS26) <i>(They (co-teachers)are my rant buddies.)</i> (SS26)	2	148	150
Lower your expectation sa mga bata. (SS27) <i>(Lower your expectations for the students.)</i> (SS27)	2	149	160
Kanang for me is study non-stop studying gyud. (SS28)	2	150	177

<i>(For me, it's really about nonstop studying.)</i> (SS28)			
So please keep on studying then don't limit yourself ayaw anang kana lang. (SS29) <i>(So please keep on studying and don't limit yourself—don't settle for just that.)</i> (SS29)	2	150	182
Teaching ESP Especially in grade 9 because the subject or the topics in ESP 9 are quite ahh...Somewhat we can say is boring. (SS30) <i>(Teaching ESP, especially in Grade 9, is challenging because the subject or topics in ESP 9 are somewhat boring.)</i> (SS30)	3	151	4-5
So medyo its quite hard for me or challenging on how to teach them. (SS31) <i>(So it's quite hard or challenging for me to teach them.)</i> (SS31)	3	151	10
And also and pagtatagalog kay I am used to speak English nya after how many years karon ra	3	152	15-18

gyud ko nakabalik ug teach ug Filipino or tagalog. (SS32) <i>(And also, speaking Tagalog is challenging because I am used to speaking English. After many years, it's only now that I have returned to teaching Filipino or Tagalog.) (SS32)</i>			
The first challenge is how am I going to teach them without any resources. (SS33) <i>(The challenge is how am I going to teach them without any resources.) (SS33)</i>	3	155	87
Big impact jud. (SS34) <i>(It has a big impact.) (SS34)</i>	3	152	19
I cannot discuss well in front because I don't know the topic of ESP, so I cannot relate much. (SS35)	3	152	28-29
Good. Ahh it is quite overwhelming because some of the topics are relatable to our daily experiences, situations, real life situations. (SS36)	3	152-153	36-38

<i>(Good. It is quite overwhelming because some of the topics are relatable to our daily experiences, situations, and real-life situations.)</i> (SS36)			
So the experience is somewhat roller coaster. (SS37) <i>(The experience is somewhat (like) a roller coaster.)</i> (SS37)	3	153	42
Actually, when it comes to ESP I only give a discussion. (SS38)	3	153	47
During my discussion I always input real life examples so that they can relate. (SS39) <i>(During my discussion, I always provide real-life examples so that they can relate.)</i> (SS39)	3	153	49-50
Since it is ESP and pagpapakatao ang center of the topic, so I always find time that whenever I discuss I approach them. (SS40) <i>(Since it is ESP and 'pagpapakatao' is the center of the topic, I always make time to approach them whenever I discuss. (SS40)</i>	3	153	52-52

Individual experience... Sharing of individual experience. I or you heard some stories that are very realistic and came from their hearts. (SS41) <i>(Individual experience... Sharing individual experiences. I've heard some stories that are very realistic and come from their hearts.) (SS41)</i>	3	154	62-66
Dili jud ko direkta sa higher ups ari lang gyud ko mangayo ug support sa people who handles the subject. (SS42) <i>(I don't go directly to the higher-ups; I just ask for support from the people who handle the subject.) (SS42)</i>	3	155	84-85
So where can I get this support is from my co-teachers who is handling this one last or previous year. So diha ko naka kuha ug mga support like giving the copies of the SLK and materials. (SS43) <i>(So, where I can get this support is from my co-teachers who handled it last or the previous year.</i>	3	155	88-90

<i>That's where I got support, like receiving copies of the SLK and materials.) (SS43)</i>			
Professional development. Ahh recently during our INSET we got some strategies. (SS44) <i>(Professional development. Recently, during our INSET, we learned some strategies.) (SS44)</i>	3	155	91-92
And also mentoring. We have this peer mentoring because I keep on asking how to teach this subject since for me nga ako gani as a teacher I felt boring no. Kay murag lisod kayo sa tanan somehow. Layo ra gyud kayo sa tanan sa akua so I need some mentoring from my peers. (SS45) <i>(And also mentoring. We have peer mentoring because I keep asking how to teach this subject. For me, as a teacher, I find it boring. It feels difficult for everyone, somehow. It's really far from what I know, so I need some mentoring from my peers.) (SS45)</i>	3	155	95-99
By teaching me and supporting me by giving me copies of their test papers. (SS46)	3	156	106

Group sharing...Oo kay it lessen the burden in teaching them kay once mag group sharing sila naa silay kanang place bitaw nga para nila ra gyud. (SS47) <i>(Group sharing... Yes, because it lessens the burden in teaching them. When they do group sharing, they have a space that's really just for them.) (SS47)</i>	3	156	128-130
Sharing ilaha kay they learn to kuan speak man. (SS48) <i>(Sharing helps them because they learn to speak.) (SS48)</i>	3	157	133-134
First challenge that I encountered in teaching AP subject particularly is the medium of instruction. (SS49)	4	158	3-4
Foundation kay as English major my foundation during my college years mainly in the English subject Wala kayo history when we talk about AP is history mao na siya. (SS50)	4	158	8-9

<i>(My foundation, as an English major, was mainly in the English subject during my college years. I don't have much background in history, especially when we talk about AP (Araling Panlipunan); that's where my knowledge is lacking.) (SS50)</i>			
I'm really confident. I have to get inside the classroom full with confidence that I can deliver kay. I am the driver man gud inside the class no and then the students are the passengers, if I'm not that confident I'm going to feel nga I will not be effective in teaching the subject Ma feel sad na sa mga bata nya that will lessen the effectiveness of me as the teacher. (SS51) <i>(I'm really confident. I have to enter the classroom full of confidence that I can deliver because I am the driver in the class, and the students are the passengers. If I'm not confident, I'll feel that I won't be effective in teaching the subject. The students will feel that too, and it will lessen my effectiveness as a teacher.) (SS51)</i>	4	159	23-29

I discovered myself nga kaya pud diay nako mo handle ug subjects nga Filipino language ang gamiton nga medium of instruction. (SS52) <i>(I discovered that I can handle subjects that use Filipino as the medium of instruction.) (SS52)</i>	4	160	40-41
Depend on the subject matter I'm going to handle and to what kind of learners I have. (SS53) <i>(It depends on the subject matter I'm going to handle and the kind of learners I have.) (SS53)</i>	4	160	43-44
Differentiated instruction. (SS54)	4	160	57
It's very important and necessary kay wala man, we do not own the management. (SS55) <i>(It's (Administrative support) very important and necessary because we do not own the management.) (SS55)</i>	4	161	70-71
Ay basta kanang two heads are better than one and no one is an island kana that we cannot stand on our own. (SS56)	4	161	76-77

<i>(It's like the saying, "Two heads are better than one" and "No man is an island," meaning we cannot stand on our own.)</i> (SS56)			
Kana bitawng during mag conduct ug classroom observations. (SS57) <i>(Like when conducting classroom observations.)</i> (SS57)	4	161	82
From my colleagues from the master teachers kay from their feedback. (SS58) <i>(From my colleagues, especially the master teachers, through their feedback.)</i> (SS58)	4	162	85-86
We have trainings we also have mentoring mga seminars and workshops. (SS59) <i>(We have trainings, mentoring, seminars, and workshops.)</i> (SS59)	4	162	92-93
Classroom observation giving feedback. (SS60) <i>(Classroom observation and giving feedback.)</i> (SS60)	4	162	105
Kalma lang. (SS61)	4	163	116-117

<i>(Just stay calm.)</i> (SS61)			
I really do believe to the saying that we cannot control the wind but we can adjust our sailings. (SS62) <i>(I really believe in the saying that we cannot control the wind, but we can adjust our sail.)</i> (SS62)	4	163	121-122
I cannot control the wind but I can adjust my sailing. (SS63)	4	165	158
Need nimo mag effort nga mo study pa beyond that information kay di man na imong major. (SS64) <i>(You need to make an effort to study beyond that information because it's not your major.)</i> (SS64)	5	166	5-6
Kay ako di kayko kahibaw mo analyze sa ubang subject sa music nga part kay lisod jud siya nga part pero naninguha ko. (SS65)	5	171	124-126

<i>(Because I don't really know how to analyze other subjects, especially the music part. It's really a difficult part, but I tried my best.)</i> (SS65)			
Dili gyud ka kahimo dayon ug lesson plan. (SS66) <i>(You really can't make a lesson plan right away.)</i> (SS66)	5	166	11
It needs more effort, time, dedication gyud para ma master nimo ang topic so big impact. (SS67) <i>(It needs more effort, time, and dedication to master the topic, so it has a big impact.)</i> (SS67)	5	167	17-18
Naa say gamay nga part ana sad nga di ra sad kag ma pressure kay di man na nimo siya major. (SS68) <i>(There's also a small part of it where you shouldn't feel pressured because it's not your major in the first place.)</i> (SS68)	5	167	19-20
Ang Filipino kay ang grammar jud kay magkalibogay na. Kay for example kanang first subject mo handle ko ug English nya next kay AP	5	167	30-33

nya MAPEH nya Filipino so kana mura kog ma stress ana.) (SS69) <i>(Filipino grammar can be confusing to me. For example, my first period, I handle English, then AP, then MAPEH, and then Filipino. It feels like it's stressful for me. (SS69)</i>			
Kanang pariha sa TLE kanang more on technical man gyud na siya so pang technical sad jud na na siya nya sa MAPEH kay more on psychomotor lang jud na siya so pwede sila patan-awon ug mga Youtube like mga videos so kana siya. (SS70) <i>(TLE is more on technical skills, so it's really focused on that. As for MAPEH, it's more on psychomotor skills, so you can have them watch YouTube videos, like instructional videos, for that.) (SS70)</i>	5	168	50-53
Mura siyag kanang unlocking bitaw kanang ma integrate imong major ba. Nya sa unlocking kay learner-centered man na siya so sila sad pa discoveron sa word nga imohang i-klase. Kana	5	169	61-68

bitawng murag general to specific bitaw ko. So ing-ana general to specific, prior knowledge sa bata una and akoang input pero di siya student-centered alone pero dili pud siya teacher-centered so murag balance. (SS71) <i>(It's like unlocking, where your major is integrated. In unlocking, it's learner-centered, so you also help them discover the word you're going to teach. It's kind of like going from general to specific. So, I start with the general, then move to the specific. I first check the prior knowledge of the students and then give my input. It's not purely student-centered, nor purely teacher-centered—it's a balance.) (SS71)</i>			
So magbuhat ug activity kay kung asa ang interest sa bata or kung asa siya mas interesado mo buhat. (SS72) <i>(So, when creating an activity, it's based on the students' interests or where they are more interested in working.) (SS72)</i>	5	170	99-100

So if first day na siya sa class so mag multiple intelligence ka nga exam para ma identify nimo unsay naa sa bata and so makahibaw na ka unsay angay nimo buhaton para sa bata kay ana man sila if interesado ang bata nga makat-on gyud ana kay maka provide siya ug output nga maka ana ka nga satisfactory or nay satisfaction sa teacher. (SS73) <i>(So, if it's the first day of class, you give a multiple intelligence test to identify what the students have. This way, you'll know what to do for each student. If the student is interested in learning, they can provide an output that will make you say, "This is satisfactory," or you'll see satisfaction from the teacher's side.) (SS73)</i>	5	170	101-106
And so mao to siya naka provide ko ug mga materials like for example health man to siya nga subject. Naghimo ko ug karton sa sigarilyo kanang dako nga karton sa sigarilyo nya ang katong sigarilyo is tulo ka buok. Tulo nya gisud nako didto kay three types man of smokes gani nya didto naa didto ang mga meaning sa kung	5	169-170	77-87

unsa ang first hand smoker, second hand smoker, nya third hand smoker and then sa presenting of visual aid murag ang kaning imo ganing visual aid is nag kuan na siya kanang appropriate na siya sa kung unsa imong topic karon. So mao jud na akong kasagaran buhaton samot nag dili na nako major nga subject. (SS74) <i>(So, I provided materials for example in a health subject. I made a large cigarette carton with three cigarettes inside. There were three types of smokers: first-hand smoker, second-hand smoker, and third-hand smoker. I included their meanings. When presenting a visual aid, it should be appropriate for the topic you're discussing. That's usually what I do, especially when the subject isn't my major.) (SS74)</i>			
Mura siyag diorama mura siyag ing-ana ba makita gyud sa bata if unsay mahitabo if I inhale nila ang kanang smoke ug ang pagpagawas sa smoke sa sigarilyo mura siyag realia. (SS75)	5	170	94-97

<i>(It's like a diorama. It really shows the students what happens if they inhale smoke or if the smoke is exhaled from a cigarette. It's like a realia, something tangible they can see.)</i> (SS75)			
Mo hatag sila ug mga or mo ingon sila nga mag group discussion Like ask the other teacher kung unsay mga angay buhaton like sa mga master teacher. (SS76) <i>(They give suggestions or say that we should have a group discussion, like asking other teachers, especially the master teachers, about what should be done.)</i> (SS76)	5	171	108-110
Kanang group discussion. (SS77) <i>(Group discussion.)</i> (SS77)	5	171	116
Bitaw kanang mohatag bitaw sila ug kanang mga technical assistance. (SS78) <i>(They really provide technical assistance.)</i> (SS78)	5	171	117-118
Mahuman ra ni tanan hapit na ang April. (SS79)	5	172	135

<i>(This will all be over soon; April is almost here.)</i> (SS79)			
Mo gaslight lang jud ta sa atong self nga mahuman ra jud ni nato. (SS80) <i>(We just have to gaslight ourselves, telling ourselves that we will get through this.)</i> (SS80)	5	172	142
Kasagaran gyud Nakong buhaton kay basta positive ka sa tanang butang kanang mo ingon ka nga “ay, problem ani challenge ni nimo” pero imo siya I take positively maka kuan man gyud ka nga ahh mao ni akong buhaton Ahh maka learn man gyud ko ani so sige nalang. (SS81) <i>(What I usually do is stay positive about everything. When you say, “Oh, this problem is a challenge for you,” but you take it positively, you’ll realize, “Oh, this is what I’ll do. I’ll learn from this, so it’s fine.”)</i> (SS81)	5	172-173	152-156
Basta dili lang gyud mag bagolbol kay lage knowing nga grabe kaayo ni ug struggle kay ug mag bagolbol ka mosamot man imohang	5	173	162-169

problema. Kay stress pa ka, maglibog pa ka unsay imo buhaton mawala na ka sa passing kung mag bagolbol ka so ikaw ra gihapon ang mag manage sa imohang kaugalingon pagsulbad kay bisag mag bagolbol pa ka diha bisag mag yawyaw pa ka At the end of the day ikaw raman mo human ana, dili man sila. Wa may mo tabang nimo. (SS82) <i>(As long as you don't complain, because knowing that this is a big struggle, if you complain, your problem will just get worse. You'll be stressed, confused about what to do, and you might lose focus on passing. You're the one who will manage yourself and find a solution, because no matter how much you complain or grumble, in the end, it's you who will finish it, not them. No one will help you.) (SS82)</i>			
Kung unsa man gani ang mga challenges diha atung dawaton sa walay pagkusmod sa nawng. (SS83)	5	173	172-173

(Whatever challenges come our way, we should accept them without showing frustration or displeasure.) (SS83)			
Like as a teacher Umm well basically it's the content itself. (SS84) <i>(As a teacher, it's basically the content itself.)</i> (SS84)	6	174	5
Did it really affect my confidence? Umm no not really because of we as teachers we really not go to class not prepared so before coming to class you have to make sure that you are ready and you get to have ten steps ahead or a hundred steps ahead. (SS85) <i>(Did it really affect my confidence? Umm, not really, because as teachers, we don't go to class unprepared. Before coming to class, you have to make sure that you are ready and that you're already ten steps ahead, or even a hundred steps ahead.)</i> (SS85)	6	1775	21-24
Well, it made me a better person because once a teacher is always a student and who dares to	6	176	46-50

teach must never cease to learn and every day is a learning day so every day you really have to learn something and being able to teach another subject apart from what you are majoring that's another opportunity for you. (SS86) <i>(Well, it made me a better person because once a teacher, always a student. Whoever dares to teach must never cease to learn, and every day is a learning day. So, every day, you really have to learn something. Being able to teach another subject apart from your major is another opportunity for you.) (SS86)</i>			
Approach is constructivist approach. (SS87) <i>((My) Approach is constructivist approach.) (SS87)</i>	6	176	52
Operant conditioning behaviorist approach because we have to be sensitive to what the students need so that we will be able to cater what they need and provide them the most appropriate learning experiences that are	6	177	60-63

significant and relevant to your learning journey. (SS88) <i>(Operant conditioning, a behaviorist approach, is important because we have to be sensitive to what the students need so that we can cater to those needs and provide them with the most appropriate learning experiences that are significant and relevant to their learning journey.) (SS88)</i>			
Kay in MAPEH regardless of the language there are a lot of MAPEH lessons wherein you can actually integrate English, like song interpretation you ask the students to interpret the song then you can ask the student to deliver a song in a poem way or poetic something like that. (SS89) <i>(In MAPEH, regardless of the language, there are a lot of MAPEH lessons where you can actually integrate English. For example, in song interpretation, you can ask the students to interpret the song, and then have them deliver the</i>	6	177	75-78

<i>song in a poetic way or something like that.)</i> (SS89)			
It really affects your administrative support defines the quality of teaching you can provide. (SS90) <i>(It really affects you because administrative support defines the quality of teaching you can provide.)</i> (SS90)	6	178	100-103
Mentoring naa with the colleagues. (SS91) <i>(Mentoring which is done with colleagues.)</i> (SS91)	6	179	111
They're very supportive actually because I'm only handling one, Values education subject and although it's just dili man siya values education is not so hard man gud na subject. (SS92) <i>(They're very supportive, actually, because I'm only handling one subject, Values Education. Although it's just Values Education, it's not such a hard subject.)</i> (SS92)	6	179	121-123

Well, I have the best and the strongest support system Yeah, kay first is God I have a very strong relationship with God I kong faith ni Lord is grabe and then my family and the circle of friends. (SS93) <i>(Well, I have the best and the strongest support system. Yeah, first is God; I have a very strong relationship with Him. My faith in the Lord is strong, and then there's my family and my circle of friends.) (SS93)</i>	6	180	140-142
I always utilize this kana bitawng carousel learning because it develops independence and responsibility among the students. (SS94) <i>(I always utilize the carousel learning technique because it develops independence and responsibility among the students.) (SS94)</i>	6	180	150-151

Formulation of Core Meanings

In this step, the researchers formulated more general restatements or meanings for each significant statement from the text. Meanings were formulated from the significant statements and were discussed with the same peer group member. The formulated

meanings were then coded and categorized. The table below presents the formulated meanings from the significant statements that have been extracted from the participants' responses to the research questions:

Table 2: *Formulation of Meanings*

Significant Statements	Formulated Meanings
The first one is the language barrier. (SS1)	Language barriers are common challenges faced by teachers assigned to teach non-English subjects. Teachers struggle with both the subject content and the language in which they must teach. The lack of proficiency in the local language, or the language of instruction, often leads to confusion, miscommunication, and difficulties in conveying complex ideas. (FM1)
It's hard for us to teach Tagalog because we are more familiar with English words. (SS2)	
And also, speaking Tagalog is challenging because I am used to speaking English. After many years, it's only now that I have returned to teaching Filipino or Tagalog. (SS32)	
First challenge that I encountered in teaching AP subject particularly is the medium of instruction. (SS49)	
Filipino grammar can be confusing to me. For example, my first period, I handle English, then AP, then MAPEH, and then	

Filipino. It feels like it's stressful for me. (SS69)	
Other challenges will be the classroom management. (SS3)	Effective classroom management is compromised when there is a lack of proper resources and support. Teachers often face difficulty in engaging students and maintaining control, especially when teaching non-English subjects. The absence of adequate teaching materials and resources makes it more challenging for teachers to deliver content effectively, which, in turn, affects classroom dynamics and student behavior. (FM2)
The challenge is how am I going to teach them without any resources. (SS33)	
For me the most challenging part is basically the mastery of the topics. (SS11)	The ability to master and teach a non-English subject effectively is often compromised by teachers' limited knowledge of the content. Teachers may need to invest significant time in preparing and acquiring new information, which can create a gap in
How can I explain it to them. (SS12)	
Teaching ESP, especially in Grade 9, is challenging because the subject or topics in ESP 9 are somewhat boring. (SS30)	
I cannot discuss well in front because I don't know the topic of ESP, so I cannot relate much. (SS35)	

My foundation, as an English major, was mainly in the English subject during my college years. I don't have much background in history, especially when we talk about AP (Araling Panlipunan); that's where my knowledge is lacking. (SS50)	their teaching performance, affecting their self-efficacy. (FM3)
Because I don't really know how to analyze other subjects, especially the music part. It's really a difficult part, but I tried my best. (SS65)	
You really can't make a lesson plan right away. (SS66)	
As a teacher, it's basically the content itself. (SS84)	
I got to the point where I question my capability and my knowledge of that certain topic. (SS13)	Teaching unfamiliar subjects impacts teachers emotionally, leading to self-doubt and stress. The lack of knowledge in a given subject, coupled with the pressure to perform well, can affect overall well-being, making the teaching
I'm really not that effective. (SS14)	
You should do research as well; it's just an addition. You will also add more ideas. (SS15)	
So it's quite hard or challenging for me to teach them. (SS31)	

It has a big impact. (SS34)	experience challenging. While the pressure to teach unfamiliar subjects can lead to self-doubt and stress, some teachers believe it ultimately makes them better educators . (FM4)
Good. It is quite overwhelming because some of the topics are relatable to our daily experiences, situations, and real-life situations. (SS36)	
The experience is somewhat (like) a roller coaster. (SS37)	
You need to make an effort to study beyond that information because it's not your major. (SS64)	
It needs more effort, time, and dedication to master the topic, so it has a big impact. (SS67)	
There's also a small part of it where you shouldn't feel pressured because it's not your major in the first place. (SS68)	
Well, it made me a better person because once a teacher, always a student. Whoever dares to teach must never cease to learn, and every day is a learning day. So, every day, you really have to learn something. Being able to teach another subject apart	

from your major is another opportunity for you. (SS86)	
I'm really confident. I have to enter the classroom full of confidence that I can deliver because I am the driver in the class, and the students are the passengers. If I'm not confident, I'll feel that I won't be effective in teaching the subject. The students will feel that too, and it will lessen my effectiveness as a teacher. (SS51)	Teaching non-English subjects fosters professional growth, enhancing educators' skills and lifelong learning. It broadens their perspectives, strengthens competencies, and promotes personal development, enriching both their careers and lives. (FM5)
I discovered that I can handle subjects that use Filipino as the medium of instruction. (SS52)	
Not really, because as teachers, we don't go to class unprepared. Before coming to class, you have to make sure that you are ready and that you're already ten steps ahead, or even a hundred steps ahead. (SS85)	
I mostly use a learner-centered approach, but I can't avoid using a teacher-centered approach sometimes. (SS16)	

Most of the time, what I use is a teacher-centered approach, where the communication is only from me. For example, if I have a question, I'll still be the one to answer. (SS17)	Teachers balance student-centered and teacher-centered approaches, using discussions and real-life examples to engage students. They adjust their teaching methods to manage classroom dynamics and ensure all students feel supported. By building rapport and tailoring lessons to students' strengths and interests, teachers create an open, trusting environment that fosters active learning. (FM6)
I give them real-life examples. (SS18)	
Actually, when it comes to ESP I only give a discussion. (SS38)	
During my discussion, I always provide real-life examples so that they can relate. (SS39)	
Since it is ESP and 'pagpapakatao' is the center of the topic, I always make time to approach them whenever I discuss. (SS40)	
Individual experience... Sharing individual experiences. I've heard some stories that are very realistic and come from their hearts. (SS41)	
It's like unlocking, where your major is integrated. In unlocking, it's learner-centered, so you also help them discover the word you're going to teach. It's kind of like going from general to specific. So, I	

start with the general, then move to the specific. I first check the prior knowledge of the students and then give my input. It's not purely student-centered, nor purely teacher-centered—it's a balance. (SS71)	
Approach is constructivist approach. (SS87)	
In MAPEH, regardless of the language, there are a lot of MAPEH lessons where you can actually integrate English. For example, in song interpretation, you can ask the students to interpret the song, and then have them deliver the song in a poetic way or something like that. (SS89)	
Each subject uses different strategies, so when I am in the values education subject strategies will be different in the English subject. (SS5)	
Like groupings, like role playing, a debate, public speaking, extemporaneous speaking. (SS6)	Teachers adapt by varying strategies, using group activities, debates, and hands-on methods for different subjects.
Some activities that I give include sharing, think-pair-share, and role-playing. (SS19)	

It depends on the subject matter I'm going to handle and the kind of learners I have. (SS53)	They tailor lessons to student interests, assess strengths, and incorporate realia for engagement. Their approach ensures meaningful and effective learning based on subject needs and student characteristics. (FM7)
Differentiated instruction. (SS54)	
TLE is more on technical skills, so it's really focused on that. As for MAPEH, it's more on psychomotor skills, so you can have them watch YouTube videos, like instructional videos, for that. (SS70)	
So, when creating an activity, it's based on the students' interests or where they are more interested in working. (SS72)	
So, if it's the first day of class, you give a multiple intelligence test to identify what the students have. This way, you'll know what to do for each student. If the student is interested in learning, they can provide an output that will make you say, "This is satisfactory," or you'll see satisfaction from the teacher's side. (SS73)	
So, I provided materials for example in a health subject. I made a large cigarette carton with three cigarettes inside. There	

were three types of smokers: first-hand smoker, second-hand smoker, and third-hand smoker. I included their meanings. When presenting a visual aid, it should be appropriate for the topic you're discussing. That's usually what I do, especially when the subject isn't my major. (SS74)	
It's like a diorama. It really shows the students what happens if they inhale smoke or if the smoke is exhaled from a cigarette. It's like realia, something tangible they can see. (SS75)	
Operant conditioning, a behaviorist approach, is important because we have to be sensitive to what the students need so that we can cater to those needs and provide them with the most appropriate learning experiences that are significant and relevant to their learning journey. (SS88)	
Technical assistance in terms of mentoring. (SS7)	

In terms of professional development, they send us to seminars and workshops. (SS8)	The administration supports teachers by providing professional development opportunities such as seminars, workshops, and INSET training. Technical assistance in mentoring, classroom observations, and feedback mechanisms help improve teaching strategies. Additionally, group discussions facilitate collaboration and knowledge-sharing among educators. (FM8)
We've had seminars, and the latest one I attended was six months ago. The seminars I had were part of INSET professional development, focusing on how to handle the classroom and students. (SS25)	
Professional development. Recently, during our INSET, we learned some strategies. (SS44)	
Like when conducting classroom observations. (SS57)	
We have trainings, mentoring, seminars, and workshops. (SS59)	
Classroom observation and giving feedback. (SS60)	
Group discussion. (SS77)	
"Go go go, you can do it, Ma'am," that's what they say. They really provide technical assistance. (SS78)	
It's like the saying, "Two heads are better than one" and "No man is an island,"	

meaning we cannot stand on our own. (SS56)	Teachers recognize the necessity of administrative support, as they do not have control over management decisions. They emphasize collaboration, believing that working together enhances their effectiveness. Additionally, they acknowledge that the level of administrative support influences the quality of their teaching. (FM9)
It's (administrative support) very important and necessary because we do not own the management. (SS55)	
It really affects you because administrative support defines the quality of teaching you can provide. (SS90)	
Encouragement. (SS20)	Teachers receive support from the administration through regular communication and encouragement. School heads and coordinators check in on teachers' progress, provide guidance, and foster open communication. (FM10)
Communication. (SS21)	
There's a communication between me and our school head or our senior high school coordinator. (SS22)	
The principal always asks me how's my teaching. (SS23)	
I always communicate with Ma'am Prieto since she is the senior high school coordinator. (SS24)	
They (co-teachers) are my rant buddies. (SS26)	

I don't go directly to the higher-ups; I just ask for support from the people who handle the subject. (SS42)	Teachers rely on their colleagues for professional and instructional support through mentoring, collaboration, and knowledge-sharing. They seek guidance from subject handlers, exchange teaching materials, and provide feedback to improve instructional strategies. Co-teachers serve as a support system, offering assistance in lesson planning, subject understanding, and teaching challenges. (FM11)
So, where I can get this support is from my co-teachers who handled it last or the previous year. That's where I got support, like receiving copies of the SLK and materials. (SS43)	
And also mentoring. We have peer mentoring because I keep asking how to teach this subject. For me, as a teacher, I find it boring. It feels difficult for everyone, somehow. It's really far from what I know, so I need some mentoring from my peers. (SS45)	
By teaching me and supporting me by giving me copies of their test papers. (SS46)	
From my colleagues, especially the master teachers, through their feedback. (SS58)	
They give suggestions or say that we should have a group discussion, like asking other teachers, especially the master	

teachers, about what should be done. (SS76)	
They're very supportive, actually, because I'm only handling one subject, Values Education. Although it's just Values Education, it's not such a hard subject. (SS92)	
Well, I have the best and the strongest support system. Yeah, first is God; I have a very strong relationship with Him. My faith in the Lord is strong, and then there's my family and my circle of friends. (SS93)	
Mentoring which is done with colleagues. (SS91)	
The mean percentage scores of the students are lower than those you are expecting in the English test. (SS4)	Teachers cope by lowering their expectations for both themselves and their students when handling subjects outside their expertise. (FM12)
Of course, lower my expectations. You should lower your expectations. Since you are handling subjects that are not related to your major, do not expect too much. Lower down your expectations. (SS9)	

Lower your expectations for the students. (SS27)	
Just stay calm. (SS61)	Teachers stay composed by adjusting their mindset, staying positive, and focusing on solutions to overcome challenges in teaching non-English subjects. (FM13)
I really believe in the saying that we cannot control the wind, but we can adjust our sail. (SS62)	
I cannot control the wind but I can adjust my sailing. (SS63)	
This will all be over soon; April is almost here. (SS79)	
We just have to gaslight ourselves, telling ourselves that we will get through this. (SS80)	
What I usually do is stay positive about everything. When you say, "Oh, this problem is a challenge for you," but you take it positively, you'll realize, "Oh, this is what I'll do. I'll learn from this, so it's fine." (SS81)	
As long as you don't complain, because knowing that this is a big struggle, if you complain, your problem will just get worse. You'll be stressed, confused about what to	

do, and you might lose focus on passing. You're the one who will manage yourself and find a solution, because no matter how much you complain or grumble, in the end, it's you who will finish it, not them. No one will help you. (SS82)	
Whatever challenges come our way, we should accept them without showing frustration or displeasure. (SS83)	
Personal strategies are done by remedial classes. (SS10)	Teachers cope with the challenges of teaching non-English subjects by continuously learning and adapting. To enhance their effectiveness, they adopt interactive and collaborative strategies such as conducting remedial classes, facilitating group-sharing activities to manage workload, and engaging students in discussions to improve communication and comprehension. Through continuous study and
For me, it's really about nonstop studying. (SS28)	
So please keep on studying and don't limit yourself—don't settle for just that. (SS29)	
Group sharing... Yes, because it lessens the burden in teaching them. When they do group sharing, they have a space that's really just for them. (SS47)	
Sharing helps them because they learn to speak. (SS48)	
I always utilize the carousel learning technique because it develops	

independence and responsibility among the students. (SS94)	adaptability, they strengthen their teaching competencies and confidence. (FM14)
--	--

Development of Cluster Themes

After obtaining formulated meanings from significant statements, the researchers arranged the statements into clusters of themes. These cluster themes, then grouped into emergent themes which was seen in Table 3. All these themes are internally convergent and externally divergent; which implies that each “formulated meaning” was coming only from one theme cluster. Table 3 showed the process of constructing the first theme through integrating various clusters of themes.

Table 3. *Clustering of themes*

Formulated Meanings	Clustered Themes
Language barriers are common challenges faced by teachers assigned to teach non-English subjects. Teachers struggle with both the subject content and the language in which they must teach. ---	--	--

Exhaustively describing the Phenomenon

In the final stage of analysis, the researchers synthesized all emerging ideas into a comprehensive description of the phenomenon. This was accomplished by integrating theme clusters, emergent themes, and formulated meanings into a structured narrative that encapsulates the experiences of English major teachers assigned to teach non-English subjects.

After an in-depth examination of the data collected from participants, the researchers identified several key challenges that these teachers encounter. Language barriers were a significant issue, as teachers struggled to effectively communicate subject content in a language they were not proficient in. This difficulty led to miscommunication, confusion, and challenges in delivering complex ideas, impacting both teaching effectiveness and student comprehension. Furthermore, a lack of familiarity with specific

subject content heightened teachers' difficulties, requiring them to dedicate additional time and effort to studying and preparing for lessons.

Classroom management also proved challenging, particularly in non-English subjects where teachers lacked the necessary instructional materials and technical knowledge. The absence of appropriate resources often led to difficulties in engaging students and maintaining control over the learning environment. Additionally, teachers faced emotional challenges, experiencing self-doubt and stress due to their limited expertise in the subjects they were required to teach. These emotional struggles affected their confidence and overall teaching effectiveness.

Despite these challenges, teachers employed various coping mechanisms to enhance their teaching performance. One of the most common strategies was lowering their expectations—both for themselves and their students—when teaching outside their area of specialization. This adjustment allowed them to focus on incremental progress rather than perfection. They also adopted interactive and collaborative teaching strategies, such as group activities, remedial sessions, role-playing, and real-life examples, to make learning more engaging and comprehensible for students.

Institutional support played a crucial role in helping teachers navigate these challenges. School administrations provided professional development opportunities, including seminars, workshops, and INSET training, which helped teachers refine their instructional strategies. Additionally, technical assistance in the form of mentoring, classroom observations, and feedback mechanisms contributed to their professional growth. Regular communication with school heads and coordinators further reinforced this support system, ensuring that teachers had access to guidance and encouragement.

Collegial support also emerged as a vital factor in teacher adaptation. Teachers relied on their co-workers for instructional assistance, knowledge-sharing, and emotional support. They frequently sought advice from subject handlers, shared teaching materials, and collaborated on lesson planning. This collaborative approach helped alleviate the burden of teaching unfamiliar subjects and fostered a supportive professional environment.

Moreover, teachers displayed resilience by continuously learning and adjusting their teaching methods to suit their students' needs. They recognized the importance of self-driven professional growth, dedicating time to furthering their knowledge and refining their instructional approaches. The integration of both student-centered and teacher-centered strategies allowed them to maintain engagement and ensure effective learning outcomes.

Ultimately, while English major teachers faced significant challenges in teaching non-English subjects, their ability to adapt, seek support, and employ innovative strategies enabled them to overcome these difficulties. The combination of administrative backing, collegial collaboration, and self-driven professional development played a crucial role in enhancing their teaching effectiveness, fostering resilience, and ensuring meaningful learning experiences for their students.

Describing the fundamental structure of the Phenomenon

In this step, findings are synthesized to eliminate redundancies and provide a clear and concise depiction of the phenomenon. After thoroughly analyzing the experiences of English major teachers instructing non-English subjects, the researchers identified key challenges and facilitators affecting their instructional effectiveness and professional growth. Below is the breakdown of the fundamental structure of this phenomenon:

Challenges in Teaching Non-English Subjects:

- **Language Barrier:** Teachers struggle with the language of instruction, leading to difficulties in delivering lessons effectively and engaging students.
- **Subject Mastery Issues:** English major teachers face challenges in understanding and teaching content outside their specialization, requiring additional time and effort to prepare lessons.
- **Classroom Management Difficulties and Lack of Resources:** The lack of familiarity with subject-specific pedagogies makes maintaining student engagement and discipline more challenging. Additionally, the unavailability of teaching materials makes it harder to create engaging and structured lessons, leaving teachers to rely on self-researched resources or improvisation.
- **Self-Doubt and Perceived Ineffectiveness:** Teachers experience moments of uncertainty and stress due to their lack of expertise in the subjects they are assigned to teach.

Facilitators in Overcoming Teaching Challenges:

- **Adaptive Teaching Strategies:** Teachers employ various approaches such as group activities, role-playing, and real-life applications to enhance learning.
- **Professional Development Opportunities:** Participation in seminars, workshops, and peer mentoring sessions equips teachers with new skills and knowledge.
- **Collaboration with Colleagues:** Support from co-teachers, subject handlers, and school administrators provides guidance and resources to navigate non-major subjects effectively.

- **Resilience and Continuous Learning:** Teachers commit to studying beyond basic information, using self-directed learning to build their confidence and instructional competence.
- **Encouragement and Support Systems:** Open communication with school heads, coordinators, and fellow educators fosters motivation and a sense of belonging in their professional community.

Overall Contributors to Instructional Effectiveness

The ability of English major teachers to adapt and excel in teaching non-English subjects is influenced by a balance of personal efforts, institutional support, and professional development. While they encounter significant hurdles, their resilience, collaborative efforts, and commitment to continuous learning enable them to navigate these challenges effectively. The fundamental structure of this phenomenon highlights a dynamic interplay between the difficulties teachers face and the support mechanisms that empower them to become more effective educators in diverse instructional settings.

Returning to the Participants to validate the findings from the study participants

This step aims to validate the study findings through "member checking," a final stage of data analysis involving follow-up interviews with participants to ensure that the results accurately reflect their lived experiences.

In this study, the researchers presented the findings to the participants and conducted follow-up interviews with six English major teachers who met the inclusion criteria. This process ensured the reliability and validity of the findings. Through these follow-up interviews, the researchers successfully identified and confirmed the major

challenges, as well as the approaches, administrative support, and coping mechanisms that English major teachers use when teaching non-English subjects.

Challenges Faced by English Major Teachers in Non-English Subjects:

- **Language Barrier** – Difficulties in using the required medium of instruction, which affects lesson delivery and student comprehension, particularly in subjects that require extensive use of Filipino or technical jargon.
- **Mastery of Non-English Subjects** – Struggles in understanding and confidently teaching subjects beyond their specialization, requiring additional effort to study the content.
- **Classroom Management Issues and Lack of Necessary Resources** – Challenges in maintaining engagement and order, especially in subjects requiring a different teaching approach. This is compounded by the lack of adequate teaching resources that could aid instruction.
- **Self-Doubt and Emotional Struggles** – The pressure of teaching non-major subjects impacts teachers' confidence, leading to stress, frustration, and feelings of inadequacy in their ability to deliver lessons effectively.

Approaches Used in Teaching Non-English Subjects:

Despite these difficulties, English major teachers developed strategies to adapt to their roles and ensure effective teaching, such as:

- **Utilization of Interdisciplinary Approaches** – Teachers integrate language skills into non-English subjects, using storytelling, discussion-based learning, and real-life examples to make content more understandable.

- **Student-Centered Learning Strategies** – Activities such as role-playing, debates, and group work allow students to engage actively, reducing the teacher's burden of subject expertise while encouraging peer learning.
- **Scaffolding and Simplified Explanations** – Breaking down complex concepts into simpler, more relatable terms helps bridge gaps in subject understanding.
- **Remedial and Supplemental Learning** – Some teachers conduct review sessions or remedial classes to reinforce challenging topics and address gaps in student comprehension.

Administrative Support in Addressing Challenges:

- **Mentoring and Peer Collaboration** – Some schools encourage peer mentoring and collaboration, allowing English major teachers to seek guidance from subject specialists.
- **Professional Development Programs** – Administrators provide workshops, training, and INSET (In-Service Training) seminars to equip teachers with skills to handle non-major subjects.
- **Resource Allocation and Teaching Materials** – Some schools supply additional instructional materials to support teachers in adapting to non-English subjects. However, not all schools have this in place, highlighting the need for further improvements.
- **Regular Feedback and Supervision** – Classroom observations and feedback sessions from master teachers help English major educators refine their instructional methods.

Coping Mechanisms Adopted by Teachers:

To manage stress and adapt to their roles, teachers employ various coping mechanisms, including:

- **Self-Directed Learning and Continuous Study** – Many teachers dedicate extra time to learning non-major subjects by reading materials, attending workshops, and watching educational videos.
- **Lowering Expectations and Adjusting Teaching Approaches** – Teachers realign their expectations based on student needs and learning capacity, ensuring lessons are more achievable.
- **Seeking Emotional Support from Colleagues** – Having "rant buddies" among fellow teachers helps relieve stress, fostering a sense of camaraderie and shared struggle.
- **Mindset Shifts and Confidence Building** – Teachers develop a growth mindset, reminding themselves that learning and improving their skills is a continuous process.

The findings highlight that while English major teachers face considerable obstacles, their ability to adapt, seek support, and engage in continuous learning plays a crucial role in overcoming these challenges and enhancing their instructional competence. Moving forward, there is a strong need for improved administrative support, structured mentoring programs, and access to training resources to help out-of-field teachers navigate their responsibilities more effectively.

CHAPTER IV

FINDINGS

Education is a dynamic field that continuously evolves to meet the changing needs of both educators and learners. Teachers play a crucial role in this process, adapting to various instructional demands, curricular adjustments, and institutional expectations. However, these adaptations often come with challenges, particularly when educators are assigned to teach subjects outside their area of expertise.

Teachers, particularly English teachers, may find themselves instructing subjects that require a different set of competencies, pedagogical approaches, and content knowledge. The transition to teaching non-English subjects demands additional preparation, continuous learning, and instructional adjustments to effectively deliver lessons. Beyond content mastery, they must also navigate challenges related to language barriers, student engagement, and instructional strategies tailored to unfamiliar subject areas.

CLUSTER THEMES

From the formulated meanings, seven (7) cluster themes were identified: (1) challenges in language proficiency, subject mastery, classroom management, and resource limitations hinder effective teaching, leading to emotional and psychological impacts; (2) professional growth through expanded teaching roles; (3) adaptive teaching strategies for student engagement; (4) institutional and administrative support for educators; (5) collegial support and collaborative teaching practices; (6) adjusting expectations and

mindset as a coping mechanism; and (7) continuous learning while adopting interactive and collaborative strategies to enhance teaching effectiveness.

EMERGENT THEMES

From ninety-four (94) significant statements, fourteen (14) formulated meanings were made. The formulated meanings were then clustered and formed into seven (7) clustered themes and then regrouped to form four (4) emergent themes. The emergent themes were the descriptive phrases which highlighted the experiences of English teachers handling non-English subjects. The five emergent themes were: (1) Educational Barriers Hinder Effective Teaching, (2) Out-Of-Field Teaching Shapes Educators' Growth and Emotional Resilience, (3) Teachers adapt strategies to foster engagement, inclusivity, and meaningful learning through continuous learning, collaboration, and mindset adjustment, and (4) Academic and institutional support foster teachers' effectiveness, collaboration, and professional growth.

Educational Barriers Hinder Effective Teaching

Teachers assigned to teach subjects beyond their expertise encounter significant challenges that affect their instructional effectiveness and overall teaching experience. Language barriers, lack of subject mastery, and limited resources create difficulties in delivering lessons, engaging students, and maintaining classroom management. These obstacles often lead to increased stress and self-doubt, making it harder for educators to perform at their best. Recognizing these challenges is essential in fostering a more supportive teaching environment that enhances both educator performance and student learning outcomes.

It's hard for us to teach Tagalog because we are more familiar with English words. (SS2, Transcript 1, Lines 16-17)

And also, speaking Tagalog is challenging because I am used to speaking English. After many years, it's only now that I have returned to teaching Filipino or Tagalog. (SS32, Transcript 2, Lines 15-18)

First challenge that I encountered in teaching AP subject particularly is the medium of instruction. (SS49, Transcript 3, Lines 3-4)

Other challenges will be the classroom management. (SS3, Transcript 1, Line 18)

The challenge is how am I going to teach them without any resources. (SS33, Transcript 3, Line 87)

For me the most challenging part is basically the mastery of the topics. (SS11, Transcript 2, Line 10)

My foundation, as an English major, was mainly in the English subject during my college years. I don't have much background in history, especially when we talk about AP (Araling Panlipunan); that's where my knowledge is lacking. (SS50)

Because I don't really know how to analyze other subjects, especially the music part. It's really a difficult part, but I tried my best. (SS65, Transcript 5, Lines 124-126)

As a teacher, it's basically the content itself. (SS84, Transcript 6, Line 5)

You really can't make a lesson plan right away. (SS66, Transcript 5, Line 11)

Teachers assigned to teach subjects outside their expertise often struggle with language barriers, subject mastery, and resource limitations, which impact their ability to

deliver effective instruction. Many English major teachers find it challenging to transition between English and non-English subjects, particularly when the medium of instruction is unfamiliar. They experience difficulties in articulating complex ideas, managing classrooms, and ensuring student engagement. Moreover, the lack of subject-specific knowledge and instructional materials also adds another layer of complexity, often leading to frustration and self-doubt. We argue that acknowledging these struggles is crucial in developing targeted interventions that support teachers in navigating out-of-field teaching assignments and improving overall instructional quality.

Research on out-of-field teaching highlights how subject unfamiliarity and language barriers significantly impact educators' instructional effectiveness. As Nob and Tañola (2024) emphasized, teachers who lack expertise in a subject often struggle with content knowledge, leading to diminished confidence and difficulties in lesson delivery. For English major teachers assigned to teach non-English subjects, the difficulties are compounded by the need to navigate an unfamiliar medium of instruction. Castro (2023) also notes that teachers often encounter student disengagement when there is a language barrier, affecting the overall learning experience. Moreover, Hidayat et al. (2024) further emphasize that classroom management becomes more demanding when students have varied language proficiencies, making it harder for teachers to maintain structure and facilitate learning. Additionally, Tingzon and Buyok (2022) also highlighted how insufficient teaching resources create further obstacles in delivering comprehensive instruction. Furthermore, in the local setting, Talingting (2019) further emphasized that teachers handling out-of-field subjects often perform at an average level in the teaching-learning process, primarily due to a lack of instructional materials and subject expertise.

These findings align with the experiences of teachers in the study, illustrating how the combination of language difficulties, content mastery issues, and resource limitations shape their teaching performance. Addressing these challenges requires targeted support, professional development, and institutional interventions to help educators navigate the complexities of out-of-field teaching while ensuring student learning remains effective.

Out-Of-Field Teaching Shapes Educators' Growth and Emotional Resilience

Teaching non-English subjects presents challenges, yet it also fosters professional growth by pushing educators beyond their comfort zones. Exposure to different disciplines broadens their perspectives, allowing them to develop new instructional strategies and adapt to diverse learning needs. As they navigate unfamiliar content, teachers strengthen their competencies and deepen their understanding of interdisciplinary connections, ultimately enhancing their effectiveness in the classroom.

Beyond skill development, out-of-field teaching also cultivates emotional resilience. Educators learn to manage difficulties by adjusting their mindset, staying positive, and focusing on practical solutions. Despite the initial struggles, they develop a greater sense of adaptability and perseverance, equipping them with the confidence to handle future teaching challenges. Through this process, they not only expand their professional capabilities but also experience personal growth, enriching both their careers and their approach to education.

You should do research as well; it's just an addition. You will also add more ideas. (SS15, Transcript 2, Lines 49-50)

The experience is somewhat (like) a roller coaster. (SS37, Transcript 3, Line 42)

You need to make an effort to study beyond that information because it's not your major. (SS64, Transcript 5, Lines 5-6)

Well, it made me a better person because once a teacher, always a student. Whoever dares to teach must never cease to learn, and every day is a learning day. So, every day, you really have to learn something. Being able to teach another subject apart from your major is another opportunity for you. (SS86, Transcript 6, Lines 46-50)

I'm really confident. I have to enter the classroom full of confidence that I can deliver because I am the driver in the class, and the students are the passengers. If I'm not confident, I'll feel that I won't be effective in teaching the subject. The students will feel that too, and it will lessen my effectiveness as a teacher. (SS51, Transcript 4, Lines 23-29)

I discovered that I can handle subjects that use Filipino as the medium of instruction. (SS52, Transcript 4, Lines 40-41)

As teachers, we don't go to class unprepared. Before coming to class, you have to make sure that you are ready and that you're already ten steps ahead, or even a hundred steps ahead. (SS85, Transcript 6, Lines 21-24)

I really believe in the saying that we cannot control the wind, but we can adjust our sail. (SS62, Transcript 4, Lines 121-122)

What I usually do is stay positive about everything. When you say, "Oh, this problem is a challenge for you," but you take it positively, you'll realize, "Oh, this is what I'll do. I'll learn from this, so it's fine." (SS81, Transcript 5, Lines 152-156)

As long as you don't complain, because knowing that this is a big struggle, if you complain, your problem will just get worse. You'll be stressed, confused about what to do, and you might lose focus on passing. You're the one who will manage yourself and find a solution, because no matter how much you complain or grumble, in the end, it's you who will finish it, not them. No one will help you. (SS82, Transcript 5, Lines 162-169)

Whatever challenges come our way, we should accept them without showing frustration or displeasure. (SS83, Transcript 5, Lines 172-173)

Despite the challenges of teaching non-English subjects, many educators acknowledge that these experiences contribute to their professional growth and adaptability. Navigating unfamiliar content encourages continuous learning, strengthens instructional skills, and fosters resilience in overcoming difficulties. Confidence and preparation become essential, as teachers refine their strategies and discover new strengths in their ability to engage students effectively. Ultimately, these experiences shape them into more adaptable and resourceful educators, proving that challenges can be valuable opportunities for growth.

From the study of Talingting (2019), educators facing out-of-field teaching challenges often take the initiative to engage in individual research and to collaborate fostering both professional growth and adaptability. Additionally, Lovitos & Donato (2023) highlights that many educators employ resilience strategies by adjusting their teaching styles to incorporate flexibility, creativity, and adaptability. These approaches enable teachers to effectively meet the varying needs of students despite their lack of specialization in the subject. By continuously refining their instructional methods,

educators not only enhance their teaching effectiveness but also strengthen their confidence in navigating unfamiliar subjects.

Out-of-field teaching plays a crucial role in shaping educators' growth and emotional resilience, as highlighted by the studies above. The necessity of teaching subjects beyond their expertise pushes teachers to engage in continuous learning, conduct individual research, and to collaborate, ultimately strengthening their professional competence. In navigating these challenges, educators develop resilience by adopting flexible and creative teaching approaches that allow them to effectively address diverse student needs. Through this process, they not only enhance their instructional effectiveness but also build confidence, adaptability, and perseverance—key traits that help them thrive despite uncertainties, reinforcing the idea that growth in teaching extends beyond subject mastery to include emotional and professional resilience.

Teachers Adapt Strategies to Foster Engagement, Inclusivity, And Meaningful Learning Through Continuous Learning, Collaboration, And Mindset Adjustment

Effective teaching requires adaptability, prompting educators to continuously refine their strategies to ensure student engagement, inclusivity, and meaningful learning experiences. Teachers balance student-centered and teacher-centered approaches, incorporating discussions, real-life examples, and interactive activities to create dynamic learning environments. They tailor their methods based on student needs, employing group activities, debates, differentiated instruction, and hands-on techniques to foster participation and understanding. Through rapport-building and lesson customization, they cultivate inclusive and supportive classrooms where learners feel valued and empowered to succeed.

I mostly use a learner-centered approach, but I can't avoid using a teacher-centered approach sometimes. (SS16, Transcript 2, Lines 55-56)

I give them real-life examples. (SS18, Transcript 2, Line 80)

Actually, when it comes to ESP I only give a discussion. (SS38, Transcript 3, Line 47)

Individual experience... Sharing individual experiences. I've heard some stories that are very realistic and come from their hearts. (SS41, Transcript 3, Lines 62-66)

It's like unlocking, where your major is integrated. In unlocking, it's learner-centered, so you also help them discover the word you're going to teach. It's kind of like going from general to specific. So, I start with the general, then move to the specific. I first check the prior knowledge of the students and then give my input. It's not purely student-centered, nor purely teacher-centered—it's a balance. (SS71, Transcript 5, Lines 61-68)

Approach is constructivist approach. (SS87, Transcript 6, Line 52)

Each subject uses different strategies, so when I am in the values education subject strategies will be different in the English subject. (SS5, Transcript 1, Lines 65-67)

Like groupings, like role playing, a debate, public speaking, extemporaneous speaking. (SS6, Transcript 1, Line 94-100)

Some activities that I give include sharing, think-pair-share, and role-playing. (SS19, Transcript 2, Lines 84-85)

It depends on the subject matter I'm going to handle and the kind of learners I have. (SS53, Transcript 4, Lines 43-44)

Differentiated instruction. (SS54, Transcript 4, Line 57)

So, when creating an activity, it's based on the students' interests or where they are more interested in working. (SS72, Transcript 5, Lines 99-100)

So, I provided materials for example in a health subject. I made a large cigarette carton with three cigarettes inside. There were three types of smokers: first-hand smoker, second-hand smoker, and third-hand smoker. I included their meanings. When presenting a visual aid, it should be appropriate for the topic you're discussing. That's usually what I do, especially when the subject isn't my major. (SS74, Transcript 5, Lines 77-78)

Operant conditioning, a behaviorist approach, is important because we have to be sensitive to what the students need so that we can cater to those needs and provide them with the most appropriate learning experiences that are significant and relevant to their learning journey. (SS88, Transcript 6, Lines 60-63)

Teachers adapt to the challenges of teaching non-specialized subjects through continuous learning, collaboration, and mindset adjustment. They engage in self-directed study, attend professional development sessions, and refine their instructional techniques to cope with unfamiliar content. Collaboration with colleagues strengthens their adaptability, as they share resources, best practices, and support systems. Additionally, educators adjust their expectations for themselves and their students, recognizing the complexities of teaching outside their specialization while striving to maintain effective instruction.

For me, it's really about nonstop studying. (SS28, Transcript 2, Line 177)

So please keep on studying and don't limit yourself—don't settle for just that. (SS29, Transcript 2, Line 182)

Of course, lower my expectations. You should lower your expectations. Since you are handling subjects that are not related to your major, do not expect too much. Lower down your expectations. (SS9, Transcript 1, Lines 155-159)

Lower your expectations for the students. (SS27, Transcript 2, Line 160)

The mean percentage scores of the students are lower than those you are expecting in the English test. (SS4, Transcript 1, Lines 46-47)

Personal strategies are done by remedial classes. (SS10, Transcript 1, Line 178)

Group sharing... Yes, because it lessens the burden in teaching them. When they do group sharing, they have a space that's really just for them. (SS47, Transcript 3, Lines 128-130)

Sharing helps them because they learn to speak. (SS48, Transcript 3, Lines 133-134)

I always utilize the carousel learning technique because it develops independence and responsibility among the students. (SS94, Transcript 6, Lines 150-151)

Flexibility and resilience play a crucial role in teachers' ability to navigate these challenges. They integrate innovative teaching strategies, including student-led discussions, role-playing, and carousel learning, to enhance engagement and comprehension. Remedial classes, group sharing, and differentiated instruction help bridge learning gaps, ensuring that students receive the necessary support to grasp complex topics. By continuously refining their teaching approaches and embracing interactive methodologies, teachers not only enhance instructional effectiveness but also foster a dynamic and student-centered learning environment.

Supporting studies affirm the significance of adaptability in teaching. Lovitos (2023) emphasizes the effectiveness of innovative methods in engaging students with diverse needs, while Hidayat et al. (2024) highlight the benefits of group discussions and tailored communication techniques in addressing language proficiency gaps. Roxas (2022) further underscores the role of ICT tools, role-playing, and student-led activities in mitigating difficulties related to subject mastery and instructional delivery. These findings collectively reinforce that teachers rely on continuous learning, collaboration, and mindset adjustment to navigate the complexities of teaching outside their expertise.

Ultimately, educators' ability to adapt through ongoing professional growth, flexible teaching strategies, and collaborative efforts ensures that learning remains engaging, inclusive, and meaningful. By embracing resilience and innovation, teachers effectively address the demands of their profession, empowering students to actively participate, think critically, and achieve academic success.

Academic And Institutional Support Foster Teachers' Effectiveness, Collaboration, And Professional Growth

Administrative support plays a crucial role in enhancing teachers' instructional effectiveness, fostering collaboration, and promoting continuous professional growth. School administrations provide essential professional development opportunities such as seminars, workshops, and INSET training, equipping educators with updated teaching strategies and subject knowledge. Technical assistance, including mentoring, classroom observations, and structured feedback mechanisms, further refines teachers' instructional approaches, ensuring a more effective learning experience for students. Additionally, open communication with school heads and coordinators allows teachers to receive guidance,

encouragement, and constructive feedback, reinforcing their confidence and motivation. Beyond administrative support, collaboration among educators strengthens teaching effectiveness, as co-teachers share insights, resources, and best practices to navigate instructional challenges. By fostering a culture of support and professional learning, academic institutions empower teachers to enhance their pedagogical skills, adapt to diverse teaching environments, and ultimately improve student learning outcomes.

Technical assistance in terms of mentoring. (SS7, Transcript 1, Line 149)

In terms of professional development, they send us to seminars and workshops. (SS8, Transcript 1, Lines 151-152)

We've had seminars, and the latest one I attended was six months ago. The seminars I had were part of INSET professional development, focusing on how to handle the classroom and students. (SS25, Transcript 2, Lines 138-141)

Professional development. Recently, during our INSET, we learned some strategies. (SS44, Transcript 3, Lines 91-92)

Like when conducting classroom observations. (SS57, Transcript 4, Line 82)

We have trainings, mentoring, seminars, and workshops. (SS59, Transcript 4, Lines 92-93)

Classroom observation and giving feedback. (SS60, Transcript 4, Line 105)

Group discussion. (SS77, Transcript5, Line 116)

They really provide technical assistance. (SS78, Transcript 5, Lines 117-118)

It's (administrative support) very important and necessary because we do not own the management. (SS55, Transcript 4, Lines 70-71)

It really affects you because administrative support defines the quality of teaching you can provide. (SS90, Transcript 6, Lines 100-103)

Encouragement. (SS20, Transcript 2, Line 90)

Communication. (SS21, Transcript 2, Line 93)

There's a communication between me and our school head or our senior high school coordinator. (SS22, Transcript 2, Lines 104-105)

The principal always asks me how's my teaching. (SS23, Transcript 2, Line 111)

I always communicate with Ma'am since she is the senior high school coordinator. (SS24, Transcript 2, Lines 120-121)

They (co-teachers) are my rant buddies. (SS26, Transcript 2, Line 150)

I don't go directly to the higher-ups; I just ask for support from the people who handle the subject. (SS42, Transcript 3, Lines 84-85)

So, where I can get this support is from my co-teachers who handled it last or the previous year. That's where I got support, like receiving copies of the SLK and materials. (SS43, Transcript 3, Lines 88-90)

And also mentoring. We have peer mentoring because I keep asking how to teach this subject. For me, as a teacher, I find it boring. It feels difficult for everyone, somehow. It's really far from what I know, so I need some mentoring from my peers. (SS45, Transcript 3, Lines 95-99)

From my colleagues, especially the master teachers, through their feedback. (SS58, Transcript 4, Lines 85-86)

They give suggestions or say that we should have a group discussion, like asking other teachers, especially the master teachers, about what should be done. (SS76, Transcript 5, Lines 108-110)

They're very supportive, actually, because I'm only handling one subject, Values Education. Although it's just Values Education, it's not such a hard subject. (SS92, Transcript 6, Lines 121-123)

Well, I have the best and the strongest support system. Yeah, first is God; I have a very strong relationship with Him. My faith in the Lord is strong, and then there's my family and my circle of friends. (SS93, Transcript 6, Lines 140-142)

Mentoring which is done with colleagues. (SS91, Transcript 6, Line 111)

This comprehensive support system not only helps teachers refine their instructional methods but also fosters a sense of professional belonging, reducing feelings of isolation and burnout. When educators have access to continuous training and collaborative discussions, they develop innovative teaching strategies that cater to diverse student needs and classroom dynamics. Moreover, institutional backing reassures teachers that their growth and well-being are valued, motivating them to remain committed to delivering high-quality education despite challenges.

Studies highlight the significant role of institutional support in enhancing the effectiveness of out-of-field teachers. For instance, according to Tingzon and Buyok (2022), collaborative learning is a common approach among these educators, as they seek guidance from colleagues and experts to better understand unfamiliar subject content. Administrative support indeed plays a crucial role in their success, with school principals

and administrators directly influencing teachers' professional development opportunities and overall teaching experiences. Supportive leadership provides essential resources and training, aiding teachers in adapting to non-specialized.

Beyond formal administrative support, teachers rely on collaborative and self-directed learning to navigate instructional challenges. Peer support, where teachers share resources and instructional strategies, helps educators refine their approaches as asserted by Tingzon & Buyok, 2022). Consulting with experienced colleagues and subject matter experts further enhances their teaching effectiveness. Research by Talingting (2019) also emphasizes the importance of individual research and learning partnerships, enabling teachers to develop a deeper understanding of their assigned subjects. These findings underscore the importance of both institutional and peer support in fostering teacher effectiveness, collaboration, and professional growth.

A strong support system within academic institutions plays a vital role in enhancing teachers' instructional effectiveness and overall well-being. When educators receive continuous training, mentoring, and opportunities for collaboration, they not only refine their teaching strategies but also develop a stronger sense of professional identity and belonging. The supporting studies presented emphasized how collaborative learning allows teachers to seek guidance from colleagues and experts enabling them to navigate unfamiliar subject content with confidence. Furthermore, resilience strategies, as highlighted by the study of Lovitos (2023), demonstrate how adaptability, creativity, and flexibility empower teachers to overcome instructional challenges, ultimately leading to improved student learning outcomes.

CHAPTER V

DISCUSSION

The phenomenon described in this study revolves around the experiences of English major teachers handling non-English subjects. Specifically, it explores the difficulties they encounter in adapting to unfamiliar subject content, managing instructional effectiveness, and maintaining confidence in a non-specialized teaching environment. This study aims to identify the common challenges they experience, the approaches they employ to navigate these challenges, the role of administrative and peer support in facilitating their adaptation, and the coping mechanisms they employ.

Through a careful analysis of the participants' experiences, this study successfully identifies the barriers that hinder effective teaching in non-major subjects, such as language barriers, difficulty mastering topics, and doubts about personal capability. Additionally, the study highlights key coping mechanisms, including continuous learning, collaboration with peers, and instructional adjustments. The findings reinforce the importance of professional development, differentiated instruction, and administrative support in helping English major teachers refine their teaching strategies and enhance their effectiveness in out-of-field teaching.

CHALLENGES IN TEACHING NON-ENGLISH SUBJECTS

Language Barrier - English major teachers struggle with the transition to teaching in Filipino or other unfamiliar languages. Many express difficulties in explaining concepts clearly due to their greater familiarity with English vocabulary. Additionally, subjects like Araling Panlipunan (AP), Filipino, and Edukasyon sa Pagpapakatao (ESP), Understanding

Culture, Society, and Politics (UCSP), Filipino sa Piling Larang, and Philosophy pose a challenge when the required medium of instruction is different from what they are accustomed to using. These language barriers not only affect lesson delivery but also hinder student engagement, making it harder for teachers to facilitate discussions and assess comprehension effectively.

Subject Mastery Issues - Teachers find it difficult to master the content of non-major subjects, requiring extra effort and preparation time. Many acknowledge that their academic background focused primarily on English, leaving them with limited knowledge in subjects such as history and music. As a result, they experience challenges in lesson planning and struggle to confidently analyze and explain complex topics. The need for additional self-study and resource gathering adds to their workload, affecting their overall teaching performance.

Classroom Management Difficulties and Lack of Resources - The lack of familiarity with subject-specific teaching strategies makes maintaining classroom discipline and engagement more challenging. English major teachers often rely on approaches suited for language instruction, which may not always be effective in subjects requiring a different pedagogical approach. Additionally, the unavailability of teaching materials makes it harder to create engaging and structured lessons, leaving teachers to rely on self-researched resources or improvisation. The language barrier further complicates classroom interactions, as students may struggle to follow instructions, leading to disengagement and behavioral issues. Without adequate instructional materials and proper training in subject-specific teaching methods, teachers face greater difficulty in managing their classrooms effectively.

Self-Doubt and Perceived Ineffectiveness - Teachers often experience feelings of inadequacy due to their limited subject knowledge and the challenges of adapting to unfamiliar content. The struggle to find relevant teaching materials and the pressure to deliver lessons effectively contribute to stress and self-doubt. Additionally, the realization that students' performance in assessments does not meet expectations further reinforces these feelings of ineffectiveness, making teachers question their ability to deliver quality education in subjects outside their expertise.

APPROACHES USED IN TEACHING NON-ENGLISH SUBJECTS

Utilization of Interdisciplinary Approaches - Teachers integrate language skills into non-English subjects, making content more engaging and accessible. By incorporating storytelling, discussion-based learning, and real-life examples, educators help students connect abstract concepts with their own experiences. This approach allows for the natural development of language proficiency, even in subjects that traditionally focus on other skills. Teachers often rely on constructivist approaches (SS87) that guide students from general to specific concepts, ensuring a deeper understanding. Moreover, interdisciplinary teaching fosters critical thinking and problem-solving by encouraging students to draw connections between different subjects.

Student-Centered Learning Strategies - A key method employed by teachers is student-centered learning, where students take an active role in their education. Activities such as role-playing, debates, public speaking, and extemporaneous speaking (SS6) help students develop confidence and communication skills while reducing the teacher's burden of subject expertise. Group activities, such as think-pair-share and role-playing (SS19), foster collaborative learning and allow students to engage with content in a meaningful

way. By tailoring activities based on student interests (SS72), educators ensure that learning remains engaging and relevant. Additionally, peer learning enables students to gain insights from each other, reinforcing understanding and creating an inclusive classroom environment.

Scaffolding and Simplified Explanations - To bridge gaps in subject comprehension, teachers use scaffolding techniques by breaking down complex concepts into simpler, more digestible parts. This ensures that students gradually build their knowledge, moving from foundational ideas to more advanced topics. Instructors use differentiated instruction (SS54) to accommodate various learning needs, adjusting their explanations and examples to match students' proficiency levels. Checking students' prior knowledge before introducing new material (SS71) also helps them engage with lessons more effectively. Through real-life examples (SS18), educators make abstract ideas more relatable, further strengthening student comprehension.

Remedial and Supplemental Learning - Recognizing that students have different learning paces, some teachers provide remedial classes and supplemental learning sessions to reinforce challenging topics. By conducting review sessions and offering additional support, educators help students overcome learning difficulties and gain confidence in their abilities. This practice is particularly essential in subjects where students struggle with language barriers or lack prior exposure to the content. The use of tailored instructional materials, such as visual aids (SS74), ensures that learning remains interactive and engaging. Moreover, teachers employ resilience strategies by adjusting their teaching styles to incorporate flexibility, creativity, and adaptability, allowing them to meet the challenges of teaching outside their specialization.

ADMINISTRATIVE SUPPORT IN ADDRESSING CHALLENGES

Mentoring and Peer Collaboration - Many schools encourage peer mentoring, allowing English major teachers to seek guidance from subject specialists (SS45). This mentoring takes place through informal discussions, structured peer observations, and collaborative lesson planning. Teachers often rely on their co-teachers as support systems (SS26), exchanging materials, strategies, and best practices to improve their instructional methods (SS43, SS46). These collaborative efforts not only ease the transition into unfamiliar subjects but also strengthen professional relationships and teaching effectiveness.

Professional Development Programs - Administrators provide workshops, training sessions, and INSET (In-Service Training) seminars to equip teachers with the necessary skills to handle non-major subjects (SS8, SS25, SS44). These professional development programs focus on classroom management (SS25), subject-specific pedagogy, and innovative instructional strategies, ensuring that educators remain adaptable in their teaching approaches. Regular participation in such training enhances teachers' confidence and ability to deliver content effectively, even in unfamiliar disciplines.

Resource Allocation and Teaching Materials - Access to instructional materials significantly impacts a teacher's ability to adapt to a non-major subject. Some schools supply additional teaching resources, such as lesson guides and instructional modules, to assist educators in their transition (SS33, SS43). However, the availability of these resources varies across institutions, with some teachers having to rely on peer support for supplementary materials (SS42, SS46). This highlights the need for more consistent resource allocation to ensure equitable access to teaching aids.

Regular Feedback and Supervision - Classroom observations and feedback sessions from master teachers serve as essential tools for refining instructional approaches (SS57, SS58, SS60). These evaluations help teachers identify strengths and areas for improvement, leading to enhanced pedagogical practices. Additionally, administrators conduct check-ins to ensure that teachers receive the necessary guidance and encouragement (SS23). Constructive feedback fosters continuous growth, allowing educators to develop more effective teaching strategies over time.

Open Communication with Administrators - Effective communication between teachers and school administrators strengthens support systems and fosters professional growth. Regular interactions with school heads and coordinators (SS21, SS22, SS24) provide teachers with the opportunity to discuss challenges, seek advice, and receive motivation. Encouragement from administrators (SS20) boosts teacher morale, reinforcing their commitment to delivering quality education despite challenges.

COPING MECHANISMS ADOPTED BY TEACHERS

Self-Directed Learning and Continuous Study - Teachers who are assigned to teach non-major subjects rely heavily on self-directed learning to bridge the knowledge gap. Since they lack formal training in these subjects, they dedicate time outside of class hours to studying textbooks, researching online resources, and watching instructional videos to familiarize themselves with new concepts. Attending professional development programs, such as INSET (In-Service Training) seminars, workshops, and subject-specific training, also enhances their understanding of the subject matter.

Lowering Expectations and Adjusting Teaching Approaches - Teaching a non-major subject often requires teachers to recalibrate their expectations—not just for themselves but also for their students. Since they are less confident in their mastery of the subject, they acknowledge the need to simplify lessons, use more accessible teaching strategies, and set realistic learning goals. This shift in expectations helps reduce pressure on both teachers and students, allowing for a more manageable and effective learning experience.

Seeking Emotional Support from Colleagues - A significant coping mechanism for teachers is leaning on their colleagues for support. Teaching outside their specialization can be stressful, and having a strong professional support system helps them navigate challenges more effectively. Engaging in discussions, venting frustrations, and sharing best practices create a sense of camaraderie among teachers.

Mindset Shifts and Confidence Building - Adopting a growth mindset is essential for teachers in non-specialized subjects. Rather than viewing their assignment as a disadvantage, they recognize it as an opportunity for professional growth. By embracing adaptability, they gradually build confidence in their ability to teach new content. Teachers remind themselves that learning is a continuous process and that challenges in teaching unfamiliar subjects are temporary and surmountable. A strong sense of optimism plays a crucial role in their ability to persevere. They maintain a positive outlook, believing that every challenge presents an opportunity for learning and improvement. Instead of dwelling on their limitations, they focus on what they can do to enhance their teaching skills. This mindset helps them stay motivated and prevents feelings of self-doubt from overwhelming their confidence. Additionally, lowering expectations and focusing on student engagement

through differentiated instruction ensure that students can keep up with the subject matter. By maintaining a constructive perspective and actively seeking ways to improve, teachers reinforce their resilience and commitment to providing quality education, regardless of the subject they are assigned to teach.

CHAPTER VI

CONCLUSION, IMPLICATIONS, AND RECOMMENDATIONS

This study has shed light on the multifaceted experiences of English major teachers handling non-English subjects. It highlights the challenges they face, including language barriers, subject mastery difficulties, classroom management struggles, and feelings of self-doubt. These challenges impact their instructional effectiveness and overall confidence in out-of-field teaching assignments. Despite these obstacles, English major teachers employ various coping strategies, such as adaptive teaching methods, continuous professional development, collaboration with colleagues, and resilience-building approaches.

The findings emphasize the critical role of professional development programs, peer support systems, and administrative interventions in assisting teachers as they navigate non-major subjects. Training sessions, mentoring programs, and collaborative discussions provide teachers with the necessary tools to enhance their instructional strategies and subject knowledge. Furthermore, access to quality teaching materials and structured professional learning opportunities can help alleviate the burden of self-study and improvisation.

Collaboration among stakeholders, including school administrators and educators, is essential to addressing these challenges. Schools should implement initiatives that facilitate peer mentoring, encourage interdisciplinary collaboration, and provide tailored support to teachers handling subjects outside their expertise. Strengthening communication between teachers and school heads can also enhance the overall teaching and learning environment, ensuring that educators feel heard, valued, and supported in their roles.

Ultimately, this study contributes to the broader discourse on out-of-field teaching by offering insights into the lived experiences of English major teachers. It underscores the need for an inclusive and supportive educational framework that fosters teacher adaptability, professional growth, and instructional excellence. By acknowledging the complexities of out-of-field teaching and implementing effective support mechanisms, educational institutions can create a more conducive learning environment—both for teachers and students alike. Through sustained efforts in professional development, collaboration, and institutional support, English major teachers can overcome the challenges of teaching non-English subjects and continue to deliver quality education across diverse disciplines.

IMPLICATIONS

This study underscores the significant impact of out-of-field teaching on English major teachers, highlighting the challenges they encounter in language barriers, subject mastery, instructional strategies, and self-efficacy. These findings suggest the necessity of institutional support systems to equip teachers with the skills and confidence needed to handle non-major subjects effectively. Schools and policymakers must recognize the importance of structured training, professional development, and access to quality teaching materials in mitigating the difficulties associated with teaching outside one's field of expertise.

Additionally, the study emphasizes the need for collaboration among teachers, school administrators, and education stakeholders to foster a supportive teaching environment. Peer mentoring programs, interdisciplinary discussions, and regular feedback mechanisms can serve as valuable resources for teachers struggling with subject

unfamiliarity. Encouraging an open dialogue between teachers and school leaders can help tailor support programs to address specific needs, ensuring that educators receive the necessary guidance and resources to enhance their instructional effectiveness.

Furthermore, the role of adaptability and resilience in teacher effectiveness is evident. This study highlights the importance of promoting a growth mindset among teachers, where continuous learning and self-improvement become integral to their professional journey. Providing opportunities for co-teaching, collaboration, and shared lesson planning can ease the burden on teachers and enhance their confidence in handling unfamiliar subjects.

Ultimately, the study contributes to the broader discourse on teacher preparedness and support systems in education, advocating for a more inclusive and responsive framework that acknowledges the realities of out-of-field teaching. By prioritizing professional development, fostering collaboration, and strengthening institutional support, educational institutions can enhance teaching quality, improve student learning experiences, and promote long-term career satisfaction for educators navigating non-major subject assignments.

RECOMMENDATIONS

As synthesized from the findings and conclusions, the following recommendations are made:

1. **School Administrators** – must recognize the challenges faced by English major teachers assigned to non-English subjects and take proactive steps to address them. They should implement structured and ongoing professional development programs that focus not only on content mastery but also on effective pedagogy for different subject areas. Regular classroom observations and feedback mechanisms must be established to provide tailored support for teachers. Additionally, workload distribution must be carefully assessed, and policies should be put in place to limit the number of out-of-field assignments per teacher to prevent burnout and maintain instructional effectiveness.
2. **English Educators** – must actively engage in continuous learning and collaboration with subject specialists. They should seek additional certifications, attend content-specific training sessions, and participate in professional learning communities to enhance their competency in handling out-of-field subjects. Schools must establish a structured peer mentoring program where experienced teachers can guide those struggling with subject transitions. Moreover, educators should be encouraged to employ adaptive and interdisciplinary teaching strategies, integrating real-world applications and technology to improve student engagement and learning outcomes.
3. **Students** – should be trained in self-directed learning strategies to compensate for any instructional gaps that may arise due to out-of-field teaching. Schools must also

implement academic reinforcement programs, such as peer tutoring, remedial classes, and additional learning resources, to support students in subjects where teachers are not subject-matter experts. Furthermore, students should be encouraged to engage in various classroom activities, including research projects and collaborative discussions, to strengthen their critical thinking and adaptability.

4. **Future Researchers** – This study serves as a foundation for further exploration of out-of-field teaching among English major educators. Future researchers are encouraged to examine additional factors influencing teachers' adaptability, instructional effectiveness, and student performance. They may also explore intervention strategies and policy implementations that can mitigate the challenges faced by teachers in non-specialized subjects. Expanding the research to include a comparative analysis across different educational settings can provide deeper insights into best practices and areas for improvement.

FURTHER STUDY RECOMMENDATIONS

1. The Relationship Between Teaching Strategies and Student Engagement in Non-English Subjects
2. The Influence of School Administrative Support on Teacher Retention and Performance in Out-of-Field Teaching
3. Relationship Between Teaching Workload and Effectiveness of Out-of-Field Teachers
4. Exploring Student Perceptions and Attitudes Toward Teachers Handling Non-Major Subjects
5. Comparative Study of Out-of-Field Teaching in Different Educational Settings: Public vs. Private Institutions

January 8, 2025

DR. ALBERTO JUMAO-AS JR.
 Dean, College of Teacher Education
 Vice President for Academics and Research
 Colegio de San Antonio de Padua
 Supervised by the Lasallian Schools Supervisions Office
 Guinsay, Danao City

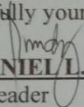

Dear Dr. Jumao-as Jr.,

Good day!

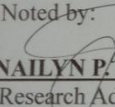

BSEd - English 3 will be conducting a study entitled "**Exploring the Experiences of English Major Teachers Handling Non-English Subjects.**" On behalf of Group 5, I would like to ask permission to allow us to conduct interview sessions with English teachers from public schools in Danao City as part of our study. The interviews will be conducted outside the school premises to ensure a comfortable setting for the teachers to share their experiences. We would greatly appreciate your approval to proceed with this aspect of our research. Your support will be invaluable to the success of our study.

Your approval to our proposal is greatly appreciated. Thank you.

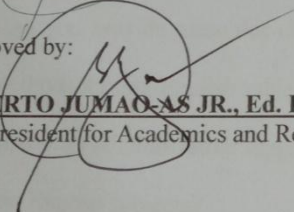

Respectfully yours,

NATHANIEL L. MENDEZ
 Group Leader

ROSELLER N. GELIG, PhD, CESO IV
 Schools Division Superintendent
 Division of Danao City
 Upland National Road, Danao City

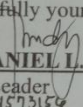

Dear Dr. Gelig,

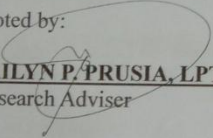

Warm greetings!

On behalf of my research group, I am writing to respectfully request permission to conduct a study entitled "**Exploring the Experiences of English Major Teachers Handling Non-English Subjects.**" This research is being undertaken as part of the requirements for the BSEd - English 3 program at Colegio de San Antonio de Padua.

The study will specifically involve in-person interviews with English teachers from selected public schools in Danao City. These interviews aim to gain deeper insights into the experiences and challenges faced by English teachers when instructing subjects outside their field of expertise. We assure you that all information gathered during the research will be handled with the highest level of confidentiality and used exclusively for academic purposes.

Thank you for considering this request, and I look forward to your favorable response.

Respectfully yours,

NATHANIEL L. MENDEZ
 Group Leader

MR. NATHANIEL L. MENDEZ

Researcher, Colegio De San Antonio De Padua
 Guinsay, Danao City

Dear Mr. Mendez:

A warm Christian greeting to you and to your family.

This refers to your request to conduct a survey among the English teachers from the selected public schools in Danao City.

Please be informed that this Office interposes no objection to your request provided the following conditions are observed:

1. All personal information gathered from the respondents shall be treated according to the rules and regulations stipulated in RA 10173 or the Data Privacy Act of 2012.
2. The schedule of the administration of the survey or activity relative to the study shall be coordinated with the school head(s) of the concerned school(s) to avoid disruption/suspension of classes.
3. The survey/study shall be conducted without cost from school or respondents.
4. This Office shall be furnished with a copy of the results of the survey/study.

Thank you and more power.

Very truly yours,

ROSELLER N. SELIG, CESO VI
 Schools Division Superintendent

APPENDIX C

Transmittal Letter to the School Principal

January 28, 2025

LEONILYN L. RAMOS
School Principal
Estefa O. Monte Memorial National High School
Cabungahan, Danao City

Dear Ma'am Ramos,

Warm greetings!

On behalf of my research group, I am writing to respectfully request permission to conduct a study entitled **"Exploring the Experiences of English Major Teachers Handling Non-English Subjects."** This research is being undertaken as part of the requirements for the BSEd - English 3 program at Colegio de San Antonio de Padua.

We believe that the participation of teachers from your school will be invaluable in providing meaningful and authentic insights to make this study possible. Their unique perspectives and experiences will greatly contribute to the depth and quality of our research.

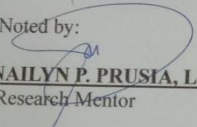

The study will specifically involve in-person interviews with English teachers from selected public schools in Danao City. These interviews aim to gain deeper insights into the experiences and challenges faced by English teachers when instructing subjects outside their field of expertise. We assure you that all information gathered during the research will be handled with the highest level of confidentiality and used exclusively for academic purposes.

Thank you for considering this request, and I look forward to your favorable response.

Respectfully yours,

NATHANIEL L. MENDEZ

Informed Consent

Signing this document, I give my consent to answer the questionnaire/interview conducted by the Third Year Teacher Education students of Colegio de San Antonio de Padua on their research entitled "Exploring the Experiences of English Major Teachers Handling Non-English Subjects", and I have been explained thoroughly what the study is all about and understand that:

1. I will be part of a research study that explores my lived experiences as a teacher, with the aim of sharing insights on the impact of the phenomenon.
2. I am informed that the researcher will conduct a one-on-one interview, lasting approximately one hour, with the use of a voice and video recorder for accurate documentation.
3. I am assured of my right to privacy and confidentiality, as stated in Republic Act 10173 (Data Privacy Act of 2012). My identity and personal data will be protected, and I may choose to withdraw my participation at any time without penalty.
4. I grant this consent freely and understand that my participation is entirely voluntary. I may refuse to participate in the study or withdraw from it without facing any consequences.
5. I understand that I may request the results of the research, which will be made available to me upon request. Should I have any questions or concerns about the study, I can contact Mr. Nathaniel L. Mendez and his group at 0919 457 3156.

APPENDIX E

Research Questionnaire

This research questionnaire is adapted from the study entitled “**English Major Teachers Teaching MAPEH in a Junior High School: A Phenomenological Study**” by **Ruby V. Montero, Joseph B. Padin, Johnaviel L. Cagat, John Rey S. Juliane, Amelia M. Bonotan, and Lloyd Matthew C. Derasin**

1. What specific challenges do you encounter when teaching subjects outside of your subject of expertise which is English?
2. How do these challenges impact your confidence and effectiveness in teaching non-English subjects?
3. How does your experience of teaching subjects other than English influence your overall teaching experience?
4. What approaches do you use to adapt your teaching methods when instructing non-English subjects?
5. Can you provide examples of successful adaptations you have made in your teaching methods for non-English subjects?
6. How does administrative support influence your experience and effectiveness in teaching non-English subjects?
7. What types of support (e.g., professional development, mentoring) have you received to help you teach non-English subjects?
8. How do your colleagues and school administration support you in managing the challenges of teaching non-English subjects?
9. What coping mechanisms do you use to manage the stress and challenges of teaching non-English subjects?

10. Can you share any personal strategies or practices that help you overcome difficulties in teaching non-English subjects?

51.	Subjects because as I already told you when you are in a public school	
52.	The government schools you should accept subjects not related to your	
53.	Majors So experience wise... If you are a teacher... You know what are	
54.	some strategies you employ... To use when you are there	
55.	Teaching wise	
56.	because we learn already when we were in college	
57.	We are.... Umm	
58.	We are taught by our teachers some strategies we are going to apply	
59.	When we are there in the teaching field	
60.	But subject wise	

61.	Of course	
62.	its hard for us as an English teacher	
63.	Because we study another languages	
64.	We find another strategies	
65.	Each subjects uses different strategies	
66.	So when I am in the values education subject	
67.	Strategies will be different in the English subject	
68.	And that would influence overall teaching experience on me	
69.	Okay when I was	
70.	Ahh...	
71.	Teaching English because I already done different schools	
72.	Umm	
73.	I'm from Lawaan to Sandayong Sur to Maslog to Eduardo Gorre to	
74.	Guinacot to Bibiana ...Ummm	
75.	And last is here	
76.	So I experienced seven schools	
77.	So of course	
78.	Different	
79.	Ahh	
80.	students	
81.	Different attitudes	
82.	Different experiences of teaching English	
83.	So when I taught English subjects with	

84.	During my time in Maslog	
85.	So I handled English 8	
86.	It's not hard for me because I'm English major	
87.	So it's easy to us because what we learn during college	
88.	We can be apply it with majors	
89.	If you are teaching other subjects	
90.	It is hard because you are going to study	
91.	Teaching methods	
92.	Of course what we learn during our college	
93.	We taught that	
94.	Like groupings	
95.	Like role playing	
96.	Diba we have that in our course?	
97.	A debate	
98.	Umm what else	
99.	Public speaking	
100.	Extemporaneous speaking	
101.	We want our students to engage for them so in real life situation they can	
102.	apply it then methods is when we construct test questions	
103.	It must be related of what we've taught in that specific grading period	
104.	We should not jump in the another topic which is not related to that specific	

105.	grading period okay so	
106.	Yeah	
107.	Provide examples of successful adaptations?	
108.	Maybe my answer for that is related to the number four	
109.	Yeah	
110.	So there are some examples that I already explained during the last question	
111.	So mao to siya ha?	
112.	Strategies ra jud siya applying some strategies that you would learn	
113.	Administrative refers to our principals	
114.	Refers to our master teachers	
115.	Because some of our master teachers are doing administrative tasks	
116.	Like observing classes	
117.	Like checking lesson plans	
118.	Like checking what you've constructed test questions	
119.	Then there is also our guidance	
120.	Yeah our guidance	
121.	If there are our administrative supports that are into English subjects like	
122.	our Sir master teachers He...	
123.	Aw...	
124.	He give some	
125.	Let us say	

126.	Some technical assistance	
127.	They give technical assistance and other supports that would make our	
128.	classes improve and more successful technical assistance only	
129.	Of course when it is refer to technical assistance its more on mentoring	
130.	So focus on mentoring	
131.	There are no other assistance from our co teachers who are teaching also	
132.	English subjects So mentoring	
133.	But if we are talking about our specific administrative supports like our	
134.	Principal of course this would be on professional development	
135.	Why is it professional development	
136.	They send us to seminars, workshops	
137.	That is professional development	
138.	Seminars, workshops, trainings, meetings	
139.	So that you can apply it in your classes	
140.	In your major subject classes	
141.	Your students would into contests	
142.	you send them to contests then when we are familiar with some strategies	
143.	for the contest you are Ahh you are aiming for winning...You aim to win	
144.	Okay so	

145.	Same answer	
146.	Technical assistance like	
147.	Sending	
148.	Ahhhh	
149.	Technical assistance in terms of mentoring	
150.	Okay	
151.	In terms of professional development	
152.	Ahh they send us to seminars and workshops	
153.	Same answer as number seven like the last question	
154.	Okay how I cope the challenge	
155.	Of course lower my expectations	
156.	You should lower your expectations	
157.	Since you are handling subjects that is not related to your major	
158.	Do not expect too much	
159.	Lower down your expectations	
160.	And	
161.	To cope the mechanism	
162.	Let your students participate some of the contest	
163.	Because you also as a teacher in that specific non major	
164.	You will also learn	
165.	You will learn from what your students learn	
166.	Any personal strategies?	
167.	Umm ano	

168.	Non-english no?	
169.	There are students who are halting readers	
170.	Sakto man diay kay non-readers	
171.	Halting readers is that they only read some of the words correctly	
172.	Some of the words mispronounce	
173.	O	
174.	They are not proficient readers	
175.	So what strategies we are going to do	
176.	Let them read	
177.	You have remedial class	
178.	Personal strategies is done or do remedial classess

1.	I am handling grade 11 students	
2.	And my non English subjects are Understanding Culture, Society and	
3.	Politics.. uhhh.. Introduction to Philosophy	
4.	I also handled... Uhh... Unsa gani to... Wait... Uhh... Piling Larang which	
5.	is Filipino... Yes Filipino... Ay o research...	
6.	Ay mahug ba siya sa English?	
7.	Yeah I'm also handling research	
8.	Okay so specific challenges	
9.	So Uhh	
10.	For me the most challenging part is basically the mastery of the topics	
11.	So of course if I'm	
12.	My major is English and I am teaching English for how many years already	
13.	So Uhh	
14.	When I got here in DepEd	
15.	Mao jud ni siya no	
16.	Ang mastery jud sa topic and then unsaon nako siya pag pasabot sa mga	

17.	Bata nga mas masabtan niya Knowing that here in	
18.	Uhh	
19.	Public school daghan kaayog mga non-English speakers nga mga students	
20.	Even pagsabot ug comprehension maglisod na sila	
21.	So mao na akong struggle	
22.	Unsaon nako pagpasabot nila	
23.	It really does impact my confidence in a way that when I handled Piling	
24.	Larang that was my first time handling Filipino subject	
25.	So I got to the point where I question my capability	
26.	And my knowledge of that certain topic	
27.	Naa pa kahay makat-onan ang mga bata no?	
28.	Kay murag maski ako naglisod gyud ko	
29.	I don't really like Filipino since I'm an English	
30.	Yes	
31.	Yes the accent	
32.	Grade 12 ko Piling Larang and then magklase ko ug Filipino	
33.	Kuan siya	
34.	Taglish	
35.	Murag eight	
36.	Murag fifty percent English Fifty percent tagalog	
37.	And then murag ang transition niya ba murag maglisod ko	

38.	Murag I'm really not that effective	
39.	So murag na low gyud akong confident ato	
40.	Uhh	
41.	It actually has a good side kay	
42.	Of course if you are teaching non-English subject	
43.	So ma develop gyud imong knowledge	
44.	Mas mo widen imohang scope so dili nalang ka mag focus nalang sa	
45.	English but also sa other subjects sad kay	
46.	Of course mag study man ka	
47.	Need man ka mag study	
48.	Di man ka kay ara lang jud kay naa sa libro or unsay naa sa module	
49.	So dapat mag research sad jud ka in addition man lang jud	
50.	Mag add pa raba kag ideas	
51.	Mao na siya	
52.	Uhhh	
53.	What approaches I use to adapt in my teaching methods	
54.	Umm	
55.	Learner-centered approach man kasagaran akoo but di gyud malikayan nga	
56.	Mag teacher-centered approach ko. Since ang kuan man gyud diri sa mga	
57.	Bata kay grade 11 students labi na ang akong mga gipang handle-an	
58.	Kuan katong mga low level	

59.	Mga ing-ana gani	
60.	Nga maglisod gyud	
61.	Kasagaran gyud sa magamit nako kay teacher-centered approach where ang	
62.	communication kay akua ra ...For example if I have a question	
63.	Kang kinsang answer... So akua ra gihapon ang tubag	
64.	Maglisod sila ug kanang tubag kay naa gud tood silay tubag sayop man sad	
65.	Labi pa ganina akong gi handle-an UCSP to	
66.	Akong mga bata naa koy pangutana ang ilang mga answer paling-paling	
67.	Ang mga answer wala diri wa didto	
68.	So of course akoang question akua ra sang tubag	
69.	So mao na siya	
70.	Mixed siya teacher-centered and uhh student centered	
71.	But karong panahona kuan gyud	
72.	Maski gani here sa akoang kuan naa pa gani non-readers	
73.	Grade 11	
74.	Oo	
75.	Maong struggle gyud namo karon ang mga non-readers	
76.	Ahh okay	
77.	Sige so	
78.	Successful adaptations kay uhh	

79.	For me	
80.	Real life kuan examples ang akoang gi hatag nila	
81.	Ari ta sa Philisophy, UCSP kay more on society sila	
82.	More on uhh	
83.	Need lang gyud siya ug real life examples	
84.	And then some activities nga akong ipang hatag is kanang sharing	
85.	Think pair share and kana pud role playing kay maka gather gyud sila ug	
86.	mga ideas sa topic ana ...Mao na siya	
87.	Umm administrative support	
88.	Kanang sa kuan no	
89.	Ahh okay	
90.	Encouragement	
91.	Bitaw encouragement	
92.	Uhh	
93.	Communication	
94.	Of course uhh communication	
95.	For me if I feel uhh	
96.	for example sa katong sa Piling Larang	
97.	Ni handle ko ana for I think one and a half year pud	
98.	Nya mao pag pagsud nako jud gipada ko ana	
99.	Uhh	
100.	Para nako maglisod jud ko gyud	

101.	Pa handle-a ko tanan pa handle-a kog research pa handle-a kog other	
102.	Subjects ayaw lang nang filipino... Kay para gyud nako as in	
103.	Kay anad baya ko English gyud	
104.	Mao to there's a communication between me and our school head	
105.	Or our kanang uhh senior high school coordinator	
106.	Niingon ko kanang if pwede	
107.	Kay naa man pud bag-ong nisud nga teacher	
108.	If pwede kanang mag-ilis lang mi	
109.	So mao to nag pa ilis mi nag philosophy na jud ko tanan	
110.	So communication is the key and if naa koy gikalibgan always approach	
111.	lang gyud ta ...Also the principal always ask me how's my teaching	
112.	What kinds of support	
113.	Ahh okay	
114.	Umm	
115.	Wala paman gyud mi naka communicate ana	
116.	But I... Umm	
117.	Na obserbaran kong ma'am principal but I'm handling English man gyud	
118.	Ato reading and writing. So I never had the opportunity to kuan gani	
119.	Mentoring but I always	
120.	I always kuan man sad communicate with ma'am	
121.	Siya man ang senior high school coordinator	

122.	So I always ask for help and daghan kayo siyag suggestions	
123.	And iyang suggestion is that you just have to be prepared everytime naa ka	
124.	sa classroom and don't let the students know or feel nga naglisod ka ana nga	
125.	subject kay of course ikaw kuno English gyud ka althroughout your career	
126.	So mao na gipa handle kag una ana so	
127.	Be confident and be prepared	
128.	Preperation is the key gyud	
129.	Ayaw pagsud sa classroom nga wala kay alam	
130.	Dapat prepared ka kay dili man gud kana ran ga lesson kana lang	
131.	Daghan kayo nag follow up questions ang mga bata nga dili related sa	
132.	Imong topic ang pangutana. So always be prepared and if you feel like kuan	
133.	Pwede ra jud ka manguan	
134.	Mangayog idea	
135.	Open for communication	
136.	Seminars	
137.	Ayy yeah	
138.	We've had seminars and akong latest lang nga naapilan kay six months ago	
139.	And Seminars I had is katong INSET	

140.	professional development gihapon siya.. How to handle classroom and mga	
141.	Bata... Umm	
142.	One week seminar pud siya pero about kuan siya	
143.	About special education	
144.	Pero kung sa kuan	
145.	Wa pa jud koy ingon nga hanas jud nga mga seminars	
146.	So mao ra na akong mga seminars	
147.	INSET last September then last December kay kuan kanang SPED Special	
148.	Needs nga mga bata...Uhh support me	
149.	Uhh	
150.	Sila akoang rant buddies	
151.	Like for example uhh since ako man ang pinaka bag-ong balhin diri	
152.	At first it's hard because for me is I felt that I was alone and then walay koy	
153.	Masultian sa kung unsay mga pangutana ao gyud na ang struggle	
154.	But after two months four months is dali ra gyud akong classroom	
155.	Adjustment... Because my colleagues were very friendly kay tanang senior	
156.	high magpundok ra gyud sila so sila akong pangutan-on unsa akong	
157.	buhaton ani "Naka handle man ka ani ma'am? Pwede ko mangutana unsaon	

158.	nimo pagbuhat? Unsa ang mga activities nimo?”	
159.	And then need jud kag support jud di jud pwede nga ikaw ra jud usa ra	
160.	Coping mechanisms? So kuan for me, lower your expectation sa mga bata	
161.	Kay kuan katong ganiha mga SMAW man to	
162.	Jusko sa welding	
163.	So O, ana na siya so lower your expectation gyud but	
164.	Ako man gud ako ang klase sa taw nga I always want the best gyud	
165.	Mao na magtuon jud ko nya mag klase ko dapat mahatag jud nako ang	
166.	Tanan. But then again I always set gyud nga dili pa gyud ko master ana	
167.	So di gyud ko mo kuan sa akong kaugalingon nga mo pressure gyud nako	
168.	ako self . Nya coping mechanism kay	
169.	Umm.. How do I manage stress is lower your expectation ra jud	
170.	And unsa paman ha	
171.	Wait naglisod kog answer	
172.	Kuan be open to ideas and be open minded	
173.	Ako ko alam so ako mga bata I always tell them that “If you have an idea	
174.	please share” mao gyud na akong ingnon gyud. There’s no wrong answer as	

175.	long as nay answer sila. So mao na siya	
176.	Umm personal strategies or practices	
177.	Kanang for me is study non-stop studying gyud	
178.	Yes	
179.	You have to widen your ideas kay of course since you are handling non-	
180.	English subjects So of course if you will handle other subjects nga wala gud	
181.	sa imong gi studyhan. Naa baya tay kuan sauna pag college no kalimot ko	
182.	So please keep on studying then don't limit your self ayaw anang kana lang	
183.	Dapat you have to go beyond what you are expected to do sa classroom so	
184.	Kung kana ra ang naa sa libro no study pa research pa	
185.	If maglisod kay ako if maglisod ko and I feel that my students nga maglisod	
186.	pud I always integrate kuan jud kanang video... Kanang mga video pictures	
187.	Naa may ubang teachers nga di ganahan mag butang ug pictures sa ilahang	
188.	Slides...Ako kay I always make sure that there is always a picture mga mo	

189.	relate siya kay mga bata man gud no especially katong mga hina hina	
190.	Need jud na sila ug mga visual para mas ma imagine gyud nila	
191.	Sayon raman noon kay lage Philosophy	
192.	Studying...Ana ra siya

1.	I am handling English 8 two sections and I'm also handling English 9 two	
2.	sections and one Edukasyon sa Pagpapakatao or ESP one section.	
3.	So specific challenge that I encounter teaching outside my comfort zone	
4.	which is English is teaching ESP Especially in grade 9 because the subject	
5.	or the topics in ESP 9 are quite ahh...Somewhat we can say is boring	
6.	Ahh students cannot relate totally because its all about economics and	
7.	Umm values	
8.	Actually related siya sa economics and other thing	
9.	Umm students cannot relate deeply on the topic	
10.	So medyo its quite hard for me or challenging on how to teach them	
11.	Umm with excitement fun kay labi na topic itself is already boring	
12.	So how can I make that happen	
13.	So I give them activities that are outside the box or so	
14.	That's the challenge	
15.	And also and pagtatagalog	
16.	Kay I am used to speak English	

17.	Nya after how many years karon ra gyud ko nakabalik ug teach ug Filipino	
18.	or tagalog.	
19.	Big impact jud	
20.	It's because	
21.	I am confident in teaching English because from how many years starting	
22.	major or college days. I've been teaching English no	
23.	So It's my	
24.	It's the biggest challenge that	
25.	Umm	
26.	Relates to my confidence	
27.	I cannot discuss well in front	
28.	I cannot discuss well in front because I don't know the topic of ESP	
29.	So I cannot relate much	
30.	Except kung if I handle English	
31.	I can or I don't need lesson plan or I don't need a guide for the entire topic	
32.	But for this, the challenge is that I need to be a good posture gihapon	
33.	Maylang gihapon atoang pag atubang sa mga bata	
34.	And the effectiveness I guess is quite kay because during sa exam	
35.	makakuha man gihapon sila. Umm	
36.	Good	

37.	Ahh it is quite overwhelming because some of the topics are relatable to our	
38.	daily experiences, situations, real life situations. So it is umm	
39.	Quite umm	
40.	New to me and also umm murag mag	
41.	Since it is something new to me, umm ako sad murag it's umm up to the	
42.	challenge jud ko. Nga kuan so the experience is somewhat roller coaster	
43.	Mao ra gyud na akong feeling	
44.	What approach do I use	
45.	Approach is that whatever approach	
46.	Umm	
47.	Actually when it comes to ESP I only give a discussion	
48.	That's the only umm way that I will teach them	
49.	That they can understand my discussion and during my discussion I always	
50.	input real life examples so that they can relate and umm... I...	
51.	During our discussion as well	
52.	Kay since it is ESP and pagpapakatao ang center of the topic	
53.	So I always find time that whenever I discuss I approach them	
54.	Umm diba the usual is that you are just in front teaching them	
55.	Me is that I wanted to join with them	

56.	Mura bag modool jud ka ba	
57.	Kay ngano kuan man jud siya pang real life situation gyud siya nga topic so	
58.	you need to be part of them during the discussion.	
59.	So far in ESP... The umm	
60.	We have this	
61.	Ay no no	
62.	Individual experience...	
63.	Sharing of individual experience	
64.	So by that no	
65.	I or you heard some umm	
66.	stories that are very realistic and came from their hearts	
67.	So whenever they share in front of them	
68.	Umm they will just draw	
69.	Umm last week we have this kind of activity that they are going to draw a	
70.	four pictures out from lines. Naa toy mga lines and they are going to	
71.	connect that one. So there are students who have draw like	
72.	The other one is hospital	
73.	And she said I draw this one it's because I wanted to become a nurse	
74.	So by that	
75.	That activity she can share her experience and the students can also relate	

76.	what kind of person she is. Kay didto pa sila nakahibaw ahh ganahan diay	
77.	siya mag nurse. Murag nindot sad nga kuan kay ngano sila man mismo ang	
78.	From simple drawing ra gud siya jud nya ilaha siyang I connect into one	
79.	object nga mag represent sa ilang kaugalingon	
80.	Umm handling ESP is not our wants. When it comes to support actually	
81.	It's not our choice but umm it's a must because as you can see	
82.	Umm teachers here are kana bitawng gamay ra ta and we need to have	
83.	kanang extra loads. And when it comes to support actually I got the support	
84.	from my co-teachers. So dili jud ko direkta sa higher ups ari lang gyud ko	
85.	mangayo ug support sa people who handles the subject. So the first umm	
86.	Going back to the challenges	
87.	The first challenge is how am I going to teach them without any resources	
88.	So where can I get this support is from my co-teachers who is handling this	

89.	one last or previous year. So diha ko naka kuha ug mga support like giving	
90.	the copies of the SLK and materials.	
91.	Umm professional development. Ahh recently	
92.	During our INSET we got some strategies	
93.	Different strategies that we can	
94.	Umm	
95.	Use in our class and also mentoring	
96.	We have this peer mentoring because I keep on asking how to teach this	
97.	subject since for me nga ako gani as a teacher I felt boring no. Kay murag	
98.	lisod kayo sa tanan somehow. Layo ra gyud kayo sa tanan sa akua so I need	
99.	some mentoring from my peers. And during some of our professional	
100.	development katong INSET namo kay naa man gyud to siyay mga Umm	
101.	additional strategies nga actually mga updated and mga bag-o jud siya nga	
102.	mga strategies nga gihatag para sa pagtudlo. Mao to siya	
103.	Ahh okay	
104.	Same	
105.	ahh	

106.	By teaching me and supporting me by giving me copies of their testpapers...	
107.	Ahh no no	
108.	Not testpapers but activity sheets copy of the SLKs and notes	
109.	For actually teaching this subject is	
110.	Kana bang murag dali nalang para nako its because the files that they give	
111.	me is intact na siya. Naa na siyay mga quizzes	
112.	Umm or for week one for example	
113.	The support is there already in teaching this one	
114.	So medyo dali nalang kayo namo	
115.	Maka stress ang pag teach especially	
116.	Yes	
117.	Especially handling students with difficult attitudes	
118.	Umm	
119.	I have three students who are umm kuan	
120.	Kana bang ang ilahang attendance is irregular	
121.	They just kuan kanang in just a week naa siyay once or twice ra sila mosud	
122.	sa klase. Sometimes as we all know and ESP karon is daily na siya	
123.	Dili na sama sa sauna nga twice a week ra siya last time	
124.	This time is five days na gyud siya	

125.	So sa five days and pinaka maka stress nako is kani jud mga bata nga once a	
126.	week ram o tunghanaa jud ko ana ron nga mga tulo ka students.	
127.	Unsaon na namo pag manage mga bataa	
128.	Ang akong kuan ani sa akong ESP is kanang group sharing	
129.	Oo kay it lessen the burden in teaching them kay once mag group sharing	
130.	sila naa silay kanang place bitaw nga para nila ra gyud	
131.	So di sad siya ingon nga group sharing nga dinaghan	
132.	So ang group sharing nila is ginagmay lang nga they can share the topic	
133.	Instead of reporting by group nya ari sa atubangan, sharing ilaha	
134.	Kay they learn to kuan speak man

1.	Teaching English here in Estefa O. Monte Memorial National High School	
2.	I've taught Araling Panlipunan which is a Filipino subject	
3.	First challenge that I encountered in teaching AP subject particularly is the	
4.	medium of instruction. As English majors man jud, we are trained to use our	
5.	medium which is English for instruction And that was the first	
6.	That was the topmost challenge I encounter in teaching AP that was I have	
7.	to use Filipino as a language man gyud of instruction sa AP. So mao na sya	
8.	ang top most challenge. Aside from that secondly is the foundation kay as	
9.	English major my foundation during my college years mainly in the English	

10.	subject Wala kayo history when we talk about AP is history mao na siya	
11.	That's another challenge I have to study like about history or moadto sa	
12.	classroom Kay kung ari man gud ta sa atoang major murag easy nalang	
13.	kaayo nya ig adto nato kayada kayo sa second classroom kay dali nalang	
14.	cause and foundation is there no mao na siyang but one thing that is good in	
15.	that part sad kay dili mo ma stagnant kay kung ari nalang man gud ta sa	
16.	atoang Murag dili ta maka gawas sa atoang comfort zone ba	
17.	So at least as a Filipino I get to know more about history kaysa mawagtang	
18.	nalang pud siya kay naka focus nalang sa major Mao ra na siya Nya diri sad	
19.	wala nakuan ang subjects tingod kay daghan mi. Daghan mi	
20.	Nya wala kaayoy English teachers kay pila raman mi ka English teachers	
21.	diri gud maong maayo siya pagka han-ay O, junior high school teacher jud	
22.	ko but I'm also handling senior high school when it comes to teaching	
23.	I'm really confident Kana lang jud siya	

24.	I'm really confident	
25.	I have to get inside the classroom full with confidence that I can deliver kay	
26.	I am the driver man gud inside the class no and then the students are the	
27.	passengers If I'm not that confident I'm going to feel nga I will not be	
28.	effective in teaching the subject Ma feel sad na sa mga bata	
29.	Nya that will lessen the effectiveness of me as the teacher	
30.	Mao nang before getting inside the classroom I really make sure that I am	
31.	ready unya madala nako ang mga bata sa target kung asa jud padong So I	
32.	came inside the classroom always prepared and ready. Mao na	
33.	It's a worthwhile experience	
34.	It's a worthwhile experience kay when we talk about teaching man gud	
35.	It does not mean nga kung ari na ta sa field dapat naka focus na jud ta sa	
36.	atoang major There are tendencies nga because of the need of the school	
37.	kinahanglan ta mag teach ug other subject aside of our major Overall	
38.	teaching experience it's a worthwhile experience nga maka say ka nga naa	
39.	pa diay koy kaya Kana siya. You need to discover	

40.	I discovered my self nga kaya pud diay nako mo handle ug subjects nga	
41.	Filipino language ang gamiton nga medium of instruction.	
42.	Strategies...Depende	
43.	Depende, my strategies inside the classroom matter will depend on the	
44.	subject matter I'm going to handle and to what kind of learners I have Kay	
45.	nay time nga this strategy will be useful to this kind of student, another	
46.	strategy nasad will be suitable to different types of student depende sa ilaha	
47.	Depende So kay when it comes to strategies sa atoang studies during	
48.	College. Didto man to nag fill in man to during practicum years	
49.	Anha nato maaply as teachers that when it comes to strategies there is no	
50.	one specific strategy nga maka ingon ko nga this is the best sa tanan It	
51.	depends on the actual situation it depends on our learners kay we have	
52.	diverse learners We adjust I adjust kung unsay imong best suit sa klase sa	
53.	estudyante nga naa ko. Sa sitwasyon sa subject nga akoang gi handle	
54.	Yes	
55.	Oo	
56.	One successful adaptation that I have made in teaching non-English subjects	

57.	is umm. Differentiated instruction	
58.	Kana jud siya	
59.	Differentiated instruction murag na introduce	
60.	Kanus-a man ko nag eskwela ug college? Mga 2009 nag start na ko nya	
61.	today is 2025 already. And that was introduced differentiated instruction	
62.	that time and up to now that is still used and I found it useful and effective	
63.	Kay there's no a one size fits all diba So yeah kana differentiated instruction	
64.	Nya possible pa jud magamit ninyo like a hundred percent jud na magamit	
65.	na ninyo ang differentiated instruction up to this time Kailangan na ta mo	
66.	adapt mo adjust sa klase sa atoang mga bata And kato kana siya nga strategy	
67.	mada And yeah kana siya	
68.	Administrative support is very important	
69.	Ah okay	
70.	It's very important and necessary kay wala man,	
71.	we do not own the management	
72.	There's no	

73.	Unsay ngalan ani	
74.	Kanang	
75.	I forgot the word	
76.	Ay basta kanang two heads are better than one	
77.	And no one is an island kana that we cannot stand on our own	
78.	Umm I'm not the autonomy of knowledge alone of I need sad everybody's	
79.	Support. Administrative	
80.	My colleagues	
81.	So during my time importante gud ang supervision	
82.	Kana bitawng during mag conduct ug classroom observations	
83.	Kana siya	
84.	That's one powerful administrative support that I get from my school heads	
85.	From my colleagues from the master teachers	
86.	kay from their feedback	
87.	Mas mahibaw-an pa nako asa nako mas kinahanglang dapita ma improve	
88.	Asa nako dapita okay kay kanang dapita ma adjust nato kay nobody's perfect but at least we can give our all gani	
89.	Kay diba kanang of the result ba will be satisfying	
90.	Kana thank you	
91.	Okay trainings	

92.	We have trainings we also have mentoring	
93.	O mga seminars and workshops	
94.	Naa gyud mi always nay INSET	
95.	Di gyud na mawala every year naa jud nay in service training	
96.	Aside from trainings nga dilis a school level	
97.	Kana bitawng outside sa school, division, regional trainings	
98.	Every year naa gyud	
99.	Kay dili man gyud pwede nga ma stagnant lang gyud ang utok ni teacher	
100.	kay everyday we are going to teach students and we can give what we do	
101.	not have So kinahanglan jud tang mag fill in gyud no always Kana siya	
102.	mentoring diring dapita sa amoa sa school level tinudloay lang tinabangay	
103.	Ana Kato as what I have said earlier there are kind of administrative support	
104.	that we receive here. Even before	
105.	Kato classroom observation giving feedback	
106.	Relaxing	
107.	O kalma lang gyud	
108.	And then if you are not ready to	
109.	Ay ako diay	
110.	During that time when I was not that ready to handle the lesson	

111.	The subject matter, the lesson the topic di gyud ko mosud sa classroom	
112.	I will give muna activities so the students can do related to the lesson that	
113.	I'm going to talk to. Di pa ko mo deliver sa lesson nga unprepared	
114.	So kana siya	
115.	And when it comes to managing stress	
116.	Kana lang gyud	
117.	Kalma lang	
118.	We cannot control man gyud the stresses that we are going to receive	
119.	And atoa lang gyud ma control is how we are going to react on it	
120.	Mao nang my reaction lang gyud	
121.	Mao sad nang I really do believe to the saying that we cannot control the	
122.	wind but we can adjust our sailings. Mao nang my reaction matters in	
123.	Everything. Even if bisag unsa pa nang stress	
124.	Kay you know teaching is really stressful	
125.	Murag mao gyud na	
126.	Murag kaakibat na gyud na niya ban ga stress gyud siya	
127.	However if you really do love your profession maka kita lang ta nga ang	
128.	atoang mga estudyante are improving. Layo-layo silage naagbtan, they learn	
129.	from us. Kung sauna naa pa sila sa ubos nagsaka saka na sila gamay	

130.	Kana ba	
131.	That means and imohang effectiveness gani	
132.	Maka kita ka	
133.	Gratifying gyud siya	
134.	Pero ang unsa ra ang naka stress diring dapita it's all the additional	
135.	You know	
136.	Additional work, paper, kana gani	
137.	O nya daghang reports nga maglibog ka nga mokalit lang gani siya	
138.	Dali n apud ang deadline nya need nimo ipang meet	
139.	Mao na siya ma stress gyud ta	
140.	Kung di nato kayang I handle	
141.	Mao nang we have	
142.	Ako sa akoang kaugalingon kana gyud	
143.	Reaction	
144.	My reaction matters	
145.	Usa pa sad usa sa atong ibutang sa atong huna huna nga di ko maka pass ani	
146.	di man pud siguro ko tanggalon sa serbisyo. Ing-ana gani ka gyud	
147.	Kalma lang gyud	
148.	Kalma	
149.	And then yeah	
150.	Managing my reaction	
151.	Tabiana diay nako no?	

152.	Kato siya	
153.	Naapil na nako didto	
154.	Follow up unta to no?	
155.	Kato siya	
156.	Kana ra	
157.	I have to remind myself lang gyud nga kato akong gi ingon ninyo nga	
158.	I cannot control the wind but I can adjust my sailing	
159.	The	
160.	My reaction ra jud matters

1.	Kuan Math ray wala	
2.	Sa six years nako naka teach Math ray wala nako na handle	
3.	Umm learning materials	
4.	Ang kuan man jud if mo handle ka ug subject that is not your major is	
5.	That need nimo mag effort nga mo study pa beyond that information kay	
6.	Di man na imong major unlike if imoha nang major kay mura ra na siyag	
7.	“Ahh ka gets na ko ana” makuha ra nimo dayon kay sa word palang daan	
8.	Kahibaw na ka unsay buhaton nimo	
9.	Topic palang gani kahibaw na ka unsay angay buhaton nimo	
10.	Kung imong major ha	
11.	Pero kung dili nimo major dili gyud ka kahimo dayon ug lesson plan kay	
12.	Kinahanglan paman nimo sabton kung unsa ang topic kay di man na imong	

13.	Major ing-ana jud na kay kinahanglan nimo sabton pa nya maghimo pa ka	
14.	Ug lesson plan nya maghimo pa ka ug activities nga appropriate ana nya	
15.	Mga objectives nga imo buhaton ana nga competency sa subjects nga imong	
16.	Gi handle so mao na siya.	
17.	It needs more effort, time, dedication gyud para ma master nimo ang topic	
18.	So big impact. Mao jud nay kasagaran nga challenges nga ma encounter	
19.	Namo. Umm naa say gamay nga part ana sad nga di ra sad kag ma pressure	
20.	kay Di man na nimo siya major	
21.	So if nay observation nya mo critic sila about sa imong discussion	
22.	About sa imong mga	
23.	Sa imong lesson	
24.	Dili ra ka ingon ana nga ka pressure kay di man na nako major	
25.	Like for example sa TLE nya gihatag na siya nako sa cookery pero ang una	
26.	Gyud nako diha kay ang carpentry	
27.	Nag carpentry ko pero wala koy idea samot na mag discuss ko about sa	

28.	Kuan blueprint pero kuan ra siya mga basic information ra gud	
29.	Mga taphaw lang so mga general term ra ako ihatag	
30.	Ang Filipino kay ang grammar jud kay magkalibogay na	
31.	Kay for example kanang first subject mo handle ko ug English	
32.	Nya next kay AP nya MAPEH nya Filipino	
33.	So kana mura kog ma stress ana	
34.	Nya sa MAPEH sad sa music kay kuan man kanang analyze	
35.	Dayon ang analyzation ana kay elements of rhythm kanang mga ing-ana	
36.	Nga mga concepts ba kana kay di jud ko kasabot unsaon na siya	
37.	Nya maglahi lahi pa jud ug pag analyze nimo sa rhythm niya for example	
38.	So mao jud nay challenge	
39.	Kanang di man jud ta ka ingon nga edge jud na nato nga subject	
40.	Pero wala man ko maka ingon nga murag na culture shock ko ba	
41.	Like sa akong kaugalingon “Hala akoy panhandle-on ani nga subject”	
42.	Math raman jud ang wala nako ma handle so far sa tanan	
43.	Kay di man sad gyud na ipanghatag sa bisag kinsa nga teacher	
44.	Naa man gyuy mga mag solve solve	
45.	Approaches	
46.	Kuan	
47.	Mura siyag kanang mo gawas gani ka sa imong comfort zone	
48.	Kay knowing nga dili na nimo major	

49.	Like unsaon nimo na pag handle	
50.	Kanang pariha sa TLE kanang more on technical man gyud na siya	
51.	So pang technical sad jud na na siya nya sa MAPEH kay more on	
52.	Psychomotor lang jud na siya so pwede sila patan-awon ug mga Youtube	
53.	Like mga videos so kana siya	
54.	Unsa nga mga approaches?	
55.	Ahh strategies	
56.	Naa man na sa inyong subject no?	
57.	Kanang mga approaches in teaching kanang mga suggestopedia mga	
58.	Inductive, deductive	
59.	Pero if mo ingon ta nga approaches usually kuan man gyud	
60.	Kasagaran gyud nako ana kay kanang	
61.	Mura siyag kanang unlocking bitaw kanang ma integrate imong major ba	
62.	Nya sa unlocking kay learner-centered man na siya	
63.	So sila sad pa discoveron sa word nga imohang i-klase	
64.	Kana bitawng murag general to specific bitaw ko	
65.	So ing-ana general to specific	
66.	Prior knowledge sa bata una and akoang input	
67.	Pero di siya student-centered alone pero dili pud siya teacher-centered	
68.	So murag balance	
69.	So for example ato mostly umm	

70.	Sa Mapeh nako nga demonstration	
71.	So kuan man three types of smoking or three types of smokes-produced	
72.	Or a cigarette ayy cigarette ba to ?	
73.	Basta three types of smokes to	
74.	Dugay dugay naman gud to	
75.	So how are you going to show the three of them to your students	
76.	Nga smoke man siya	
77.	And so mao to siya naka provide ko ug mga materials like for example	
78.	Health man to siya nga subject	
79.	Naghimo ko ug karton sa sigarilyo kanang dako nga karton sa sigarilyo	
80.	nya ang katong sigarilyo is tulo ka buok	
81.	Tulo nya gisud nako didto kay three types man of smokes gani	
82.	Nya didto naa didto ang mga meaning sa kung unsa ang first hand smoker	
83.	Second hand smoker, nya third hand smoker and then sa presenting of	
84.	Visual aid murag ang kaning imo ganing visual aid is nag kuan na siya	
85.	Kanang appropriate na siya sa kung unsa imong topic karon	
86.	So mao jud na akong kasagaran buhaton samot nag dili na nako major nga	
87.	Subject	
88.	Ug unsa ang topic ako sad ihaom akong visual aid	
89.	Kay for example ato	

90.	Mao to siya naghimo ko ug kanang dako gyud nga kaha sa sigarilyo	
91.	And then nay mga sigarilyo tulo ka buok and then nag provide sad	
92.	Ko ug integration in Science nga nagbutang ko ug kanang bottle gani	
93.	Nya nay gapas nya I aso nay kuan	
94.	Mura siyag diorama mura siyag ing-ana ba	
95.	Makita gyud sa bata if unsay mahitabo if I inhale nila ang kanang smoke ug	
96.	Ang pagpagawas sa smoke sa sigarilyo	
97.	O mura siyag realia	
98.	Then at the same time tulo man gyud siya	
99.	So magbuhat ug activity kay kung asa ang interest sa bata or kung asa siya	
100.	Mas interesado mo buhat	
101.	So if first day na siya sa class so mag multiple intelligence ka nga exam	
102.	Para ma identify nimo unsay naa sa bata and so makahibaw na ka unsay	
103.	Angay nimo buhaton para sa bata	
104.	Kay ana man sila if interesado and bata nga makat-on gyud ana	
105.	Kay maka provide siya ug output nga maka ana ka nga satisfactory	
106.	Or nay satisfaction sa teacher	
107.	Ang principal	
108.	Mo hatag sila ug mga or mo ingon sila nga mag group discussion	

109.	Like ask the other teacher kung unsay mga angay buhaton	
110.	Like sa mga master teacher	
111.	Kana ra katong nay mga major ana nga specific nga subject	
112.	Panagsa raman sila magpa seminar pero naa jud na siya	
113.	Mentoring panagsa kay maikog man sad ta magsige ug pangutana	
114.	Maong wala jud koy mabuhat	
115.	Pero nay ing-ana	
116.	Kanang group discussion	
117.	“Go go go kaya ra na nimo ma’am” ana ra na sila.	
118.	Bitaw kanang mohatag bitaw sila ug kanang mga technical assistance	
119.	Dayon mo ana ka nga okay ra ba ka diring dapita	
120.	Like for example sa kanang sa akong principal sauna akong gi ingnan nga	
121.	“ma’am if mo sud gani ka nga mo observe gani ka sa time sa music	
122.	Ma’am aw sige magtan-aw ra gyud tang duha” kay mao ra gyud	
123.	Information ra gyud akong mahatag di gyud nako mapa analyze sa bata	
124.	Kay ako di kayko kahibaw mo analyze sa ubang subject	
125.	Sa music nga part kay lisod jud siya nga part	
126.	Pero naninguha ko	
127.	Usahay maghatag ko ug mga video like mga tutorial	
128.	Para bitaw mahatagan ug justice nga nagklase jud ko	
129.	Nya matabangan ang tanan	

130.	Pero kato mo use jud ug kanang other resources nga maka help sa bata nga	
131.	makuha niya ang competency	
132.	Like kanang mga video	
133.	Mag present ba ko ug mga video diha or kana sad mga material nga maka	
134.	Support.	
135.	“Mahuman ra ni tanan hapit na ang April” (Laughed)	
136.	Kuan diay Sir	
137.	Kuan man gud ko sauna raman gud Sir like mura siya ug advantage	
138.	Nga mura siya ug kanang grateful ka nga nahatagan ka ana nga subject kay	
139.	maka learn ka ug new except sa imohang major	
140.	Mura siyag challenge nimo at the same time problema nga	
141.	At the end of the day masulbad ra nimo with a smile	
142.	Mo gaslight lang jud ta sa atong self nga mahuman ra jud ni nato	
143.	Siguro mo ana lang sad ko usahay sa akong colleagues nga	
144.	“Lisora ani oy” pero wala man gihapon silay mabuhay kay di man sad sila	
145.	Maminaw nimo	
146.	Maong mo hilom nalang ta	
147.	Kay mo ana nalang ko nga “Ay, mahuman ra lage ni”	
148.	Nya samot na ug Filipino kay ang grammar jud niya	

149.	Di man jud na malikayan nga dili ta prepared no maong usahay maka ingon	
150.	Lang pud ta ba nga “bugbug” kaayo kay di ta ka lusot lusot ug klase	
151.	Kanang wala tay ma jema-jema	
152.	Kasagaran gyud Nakong buhaton kay basta positive ka sa	
153.	Tanang butang kanang mo ingon ka nga “ay, problem ani	
154.	Challenge ni nimo” pero imo siya I take positively maka kuan man gyud ka	
155.	Nga ahh mao ni akong buhaton	
156.	Ahh maka learn man gyud ko ani so sige nalang kay mao bitaw to siya Sir	
157.	Nga (mo adto man gyud mo sa public no) so dawat lang jud mo sa tanang	
158.	Buhatonon like kung unsa na siya nga subject	
159.	Ang imoha man gyud huna-hunaon kay kung naa ka sa ubos kay	
160.	Mabalhin ka kay wa man ka kahibaw ana kay lisod na baya ug naa na mo	
161.	Sa ubos Sir so you need to be ready mentally ug physically sad	
162.	Basta dili lang gyud mag bagolbol kay lage knowing nga grabe kaayo ni	
163.	Ug struggle kay ug mag bagolbol ka mosamot man imohang problema	
164.	Kay stress pa ka, maglibog pa ka unsay imo buhaton	
165.	Mawala na ka sa passing kung mag bagolbol ka	

166.	So ikaw ra gihapon ang mag manage sa imohang kaugalingon pagsulbad	
167.	Kay bisag mag bagolbol pa ka diha bisag mag yawyaw pa ka	
168.	At the end of the day ikaw raman mo human ana, dili man sila	
169.	Wa may mo tabang nimo	
170.	Siguro mo ana ang bana nimo “Ay tabangan tika”	
171.	Nya busy man siya so ikaw ra gihapon ang mo human ana	
172.	Kung unsa man gani ang mga challenges diha atung dawaton sa walay	
173.	Pagkusmod sa nawng

Line Number	Transcription	
1.	I've been teaching English since 2008 and then before I have taught	
2.	MAPEH 7, AP 8 and AP 10, and then right now I mean currently I	
3.	Have ESP values Education 8 so those were the non-English subjects	
4.	That I have handled	
5.	Like as a teacher Umm well basically it's the content itself because knowing	
6.	For a fact that I chose English	
7.	Diba we chose this subject because this is what we want and being able to	
8.	Asked to teach another subjects considering the content that's already the	
9.	One of the major factor that I really have to consider and think about	
10.	And would somehow like for me would be a	
11.	Tawag ani	
12.	Not a hindrance not a challenge because challenges are there to be	
13.	Embraced man and and to overcome so thanks God I have overcome raman	
14.	It sad and AP man gud is my second loved subject so it's not that big	
15.	Problem and values education is just so okay ra siya because	
16.	Values you can't really teach values man	

17.	It's something that each person has you only have to just motivate	
18.	Each person to recognize and see that values inside them	
19.	And as to MAPEH no problem because the language used there was English	
20.	So yeah but in terms sa content like mastery of the content diha jud dapit	
21.	Did it really affect my confidence?	
22.	Umm no not really because of we as teachers we really not go to class	
23.	Not prepared so before coming to class you have to make sure that you	
24.	Are ready and you get to have ten steps ahead or a hundred steps ahead	
25.	Of your students because if your able to do that nothing can be wrong inside	
26.	The class so what I did in order to overcome those challenges was to just	
27.	Prepare read in advance, prepare a lot of activities	
28.	Know the level	
29.	Well actually during the first part man gud where you get to know the	
30.	Students you already get to know the capacity of your students	

31.	Once you already have measured the capacity of your students you will	
32.	Already know what kind of activities you must give and what should not	
33.	How to give it and how not to give it	
34.	So it's just about knowing the students that we have	
35.	Effectiveness?	
36.	Well if we are really to consider the kanang	
37.	Unsay tawag ana niya oy	
38.	Scientific basis niya ba	
39.	The results will show kanang	
40.	Quantitative aspect niya I must say it's not that good I mean it's not that	
41.	Best kay kanang you know the	
42.	Regardless of how you really prepare it's really up to the students man pud	
43.	And each student learns different pace baya and at different level	
44.	So it's just an average nga result not that not so big man sad	
45.	Yeah it's just okay	
46.	Well it made me a better person	
47.	because once a teacher is always a student and who dares to teach must	

48.	Never cease to learn and everyday is a learning day so everyday you really	
49.	Have to learn something and being able to teach another subject apart from	
50.	What you are majoring that's another opportunity for you that's a greater	
51.	Opportunity for you to learn new subjects so it really had helped me	
52.	Approach is constructivist approach	
53.	Yeah because	
54.	Well I generally DepEd is really adapting to a constructivist approach	
55.	And sa behaviorist pud you really have to be familiar with how the student	
56.	React to a certain stimuli	
57.	Ma'am diba mao na siya behaviorist approach man nang operant	
58.	Conditioning no? Thorndike? Ah Bandura?	
59.	Skinner	
60.	Operant conditioning behaviorist approach because we have to be	
61.	Sensitive to what the students need so that we will be able to cater what	
62.	They need and provide them the most appropriate learning experiences	
63.	That are significant and relevant to your learning journey	

64.	Ana man jud na siya like constructivist approach and behaviorist jud	
65.	Siya kasagaran kay kanang no matter how much we really try to build up ba	
66.	We have to provide them with all the scaffolding techniques that we could	
67.	Have or provide to the students but if we are not really able to get the things	
68.	That they really need	
69.	It's like were like a doctor diba nga nag tambal tambal ta sa sakit nya di siya	
70.	maigo sa tambal so it's just a waste of time	
71.	Yeah ano MAPEH	
72.	In MAPEH because MAPEH baya offers psychomotor skills activities	
73.	Mga ing-ana no but umm like a lesson in MAPEH specifically in	
74.	Music or in PE	
75.	Kay in MAPEH regardless of the language there are a lot of MAPEH	
76.	lessons wherein you can actually integrate English, like song interpretation	
77.	You ask the students to interpret the song then you can ask the student	
78.	To deliver a song in a poem way or poetic something like that	
79.	And then	

80.	Or you can ask the student to umm	
81.	Like for Arts you can actually use a paint or an Art piece and then ask the	
82.	Student like in descriptive paragraph about it so you can actually one	
83.	Subject or learning area to a another learning area and we have done that	
84.	Here like we already have done that here I think two years ago	
85.	Integrative Assesment	
86.	Three or four subjects we will talk like we will have a conference	
87.	We convene and we agree like in my case the topic was propaganda	
88.	Techniques and in their MAPEH they have this making of posters	
89.	And the elements or something like that and in Science they have this	
90.	Certain topic related to that and then for TLE about marketing something	
91.	So four learning areas and then the students will have to create one output	
92.	But four areas will be crediting the project so we call that integrative	
93.	Assessment and that is to help the students or somehow make their work	
94.	Like it lessens their time to spend working on the outputs because	
95.	Actually a year after the pandemic katong nag start na gyud ang katong	

96.	When things get to normalized so that was the time we had integrative	
97.	Assessment	
98.	I like that question	
99.	It really... unsa toy question gani? (Laughed)	
100.	It affects... like how it affects	
101.	Ahh influence	
102.	It really affects your administrative support defines the quality of	
103.	Teaching you can provide char	
104.	Oh kay ano whatever learning activities you wanted to do in your class	
105.	If not being supported by the admin and the rest of your colleagues	
106.	Then that is nothing diba so it's really important like 20 out of 10	
107.	Ing-ana siya ka importante	
108.	So far for this year none so far	
109.	Umm the previous years umm 3 years ago	
110.	Yeah naa but recently wala	
111.	Mentoring naa with the colleagues	
112.	Mentoring in such as way that like there are especially when I have this	
113.	Values Education when we talked about katong respect respect something	
114.	Then we needed to present who is smarter than girls and the boys	

115.	With regards to scientific composition of the brain which I believe	
116.	Daog jud ang boys kay men are really more intelligent than women	
117.	Man gyud scientifically so mao to I asked help from my science teacher	
118.	Co-teacher and for some explanation so okay raman sad noon	
119.	With the colleagues it's just okay	
120.	Ngi wala sila ni support char	
121.	No, they're very supportive actually because I'm only handling one	
122.	Values education subject and although it's just dili man siya lisod jud	
123.	Values education is not so hard man gud na subject	
124.	What's challenging about it is tag-as lang siya ug basahon	
125.	You really have to read long passages long texts not long but longer texts	
126.	And longer passages so that's what makes that subject challenging but	
127.	If you are really going to comprehend, understand, embrace and learn	
128.	love it it's just okay	
129.	Yeah, I can also usap them	
130.	Inuusap ko sila at kinakausap din nila ako	
131.	On my ano lang marunong din naman ako magtagalog	
132.	So nakikipag ano din naman ako sa kanila nakakapag usap din	
133.	I can communicate with them in tagalog man pud	

134.	Mas marunong din ako mag tagalog at makalitok din ako ng Bisaya	
135.	So yun	
136.	Di naman siya masyadong ano hindi siya nagging hadlang upang sila ay	
137.	Matuto sa akin	
138.	At hindi din kasi ako bias	
139.	Pero bitaw language is not a problem sa akua	
140.	Well I have the best and the strongest support system	
141.	Yeah, kay first is God I have a very strong relationship with God	
142.	Akong faith ni Lord is grabe and then my family and the circle of friends	
143.	That I have because if these circle of friends were introduced to me and	
144.	Were given to me by God lahi ra gyud ang friends nga hinatag ni Lord	
145.	Kaysa sa hinatag sa kuan	
146.	You really have to choose the friends that were introduced and were given	
147.	To you by God	
148.	Strategy	
149.	Ahh personal strategy	
150.	I always kanang utilize this kuan kana bitawng carousel learning	

151.	Because it develops independence and responsibility among the students	
152.	In what sense?	
153.	Ay actually kabalo man mo anang carousel learning	
154.	Like you divide the students ay the group in that class then assign	
155.	Them topic and aside from that it also applies the differentiated	
156.	Instruction nga strategy kana siya	
157.	And when we speak about differentiated instruction there are three ways	
158.	To differentiate instruction	
159.	First is content, the process, and the output	
160.	Like for example when you differentiate the content like the group 1	
161.	Group 2, group 3, group 4 I will ask you to study about specific topics	
162.	So different contents diba kanang that's differentiating the content	
163.	And when we speak about differentiating the process like it could be	
164.	The same content but like umm lahi lahi ug activities nga buhaton	
165.	And with that lahi lahi sad sila ug output so with that you're	
166.	Differentiating as well the output	
167.	So that is one of the best strategy that I have used	

COLEGIO DE SAN ANTONIO DE PADUA

CERTIFICATION

This is to certify that the manuscript entitled:

**" EXPLORING THE EXPERIENCES OF ENGLISH MAJOR TEACHERS HANDLING
 NON-ENGLISH SUBJECTS"**

authored by:

Shahaine C. Ente
 Ronnel A. Idano
 Nathaniel L. Mendez
 Claire Gift P. Monte
 Audree Maxine C. Villar

has undergone grammar checking, AI-generated content detection, and plagiarism screening using Grammarly software. Part 1 of the manuscript received an overall score of 79. Furthermore, 1% of the text matches external sources, indicating 99% originality, while 3% exhibits patterns that resemble AI-generated content. Part 2 of the manuscript received an overall score of 67. Furthermore, 1% of the text matches external sources, indicating 99% originality, while 13% exhibits patterns that resemble AI-generated content. Part 3 of the manuscript received an overall score of 66. Furthermore, 0% of the text matches external sources, indicating 100% originality, while 6% exhibits patterns that resemble AI-generated content.

This certification is issued on May 28, 2025, at Colegio de San Antonio de Padua, Danao City, Cebu, Philippines.

CRESILJEN BONGO

Director for Research and Innovation

CURRICULUM VITAE

Mendez, Nathaniel L.

Guinacot, Danao City, Cebu

0919-457-3156

PERSONAL INFORMATION

Date of birth: February 28, 2004

Nationality: Filipino

Civil Status: Single

Religion: Roman Catholic

EDUCATIONAL BACKGROUND

ELEMENTARY

Danao City Central School
2015-2016

JUNIOR HIGH SCHOOL

D.T. Durano Memorial Integrated
School
2019-2020

SENIOR HIGH SCHOOL

Estefa O. Monte Memorial National
High School
2021-2022

TERTIARY

Colegio de San Antonio de Padua
De La Salle Supervise School
Guinay, Danao City
2022-2026
